

# FIDALGO BAY AQUATIC RESERVE

## 2020 Forage Fish Survey Results

### SURVEYS

- 38 surveys
- 25 volunteers
- about 400 volunteer hours!

### SAMPLES

- 142 samples collected
- 55 Fidalgo Bay East
  - 87 Fidalgo Bay West

### EGGS

Samples with eggs

- 100% in May, June, July, and Sept
- 35% in March and April
- 80% average

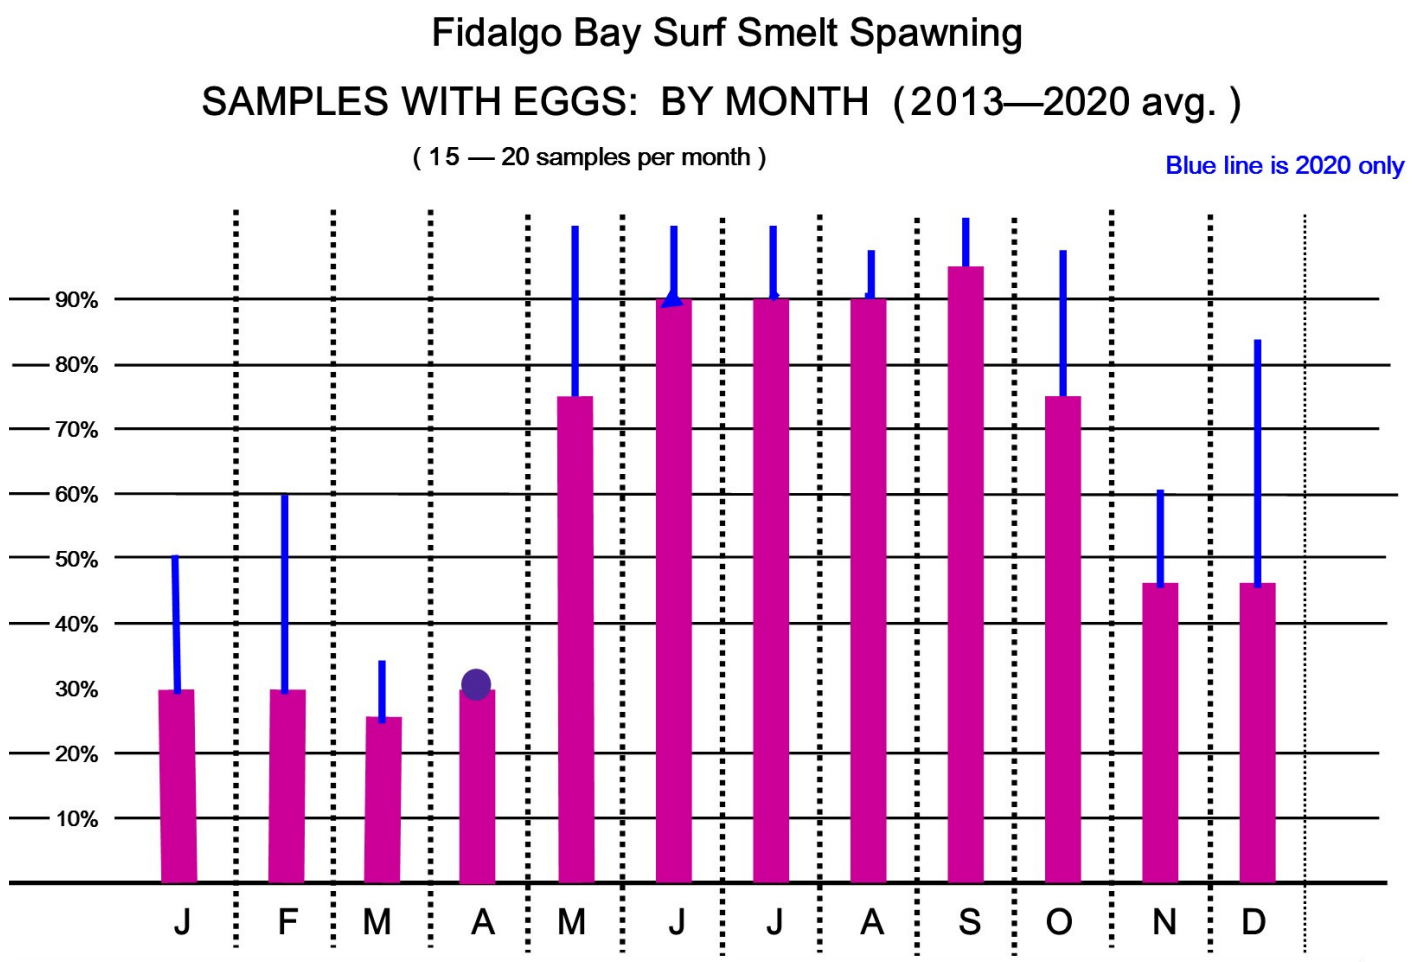

### CONDITIONS

Wind, smoke, snow, and Covid-19 all impacted this year's work!!!

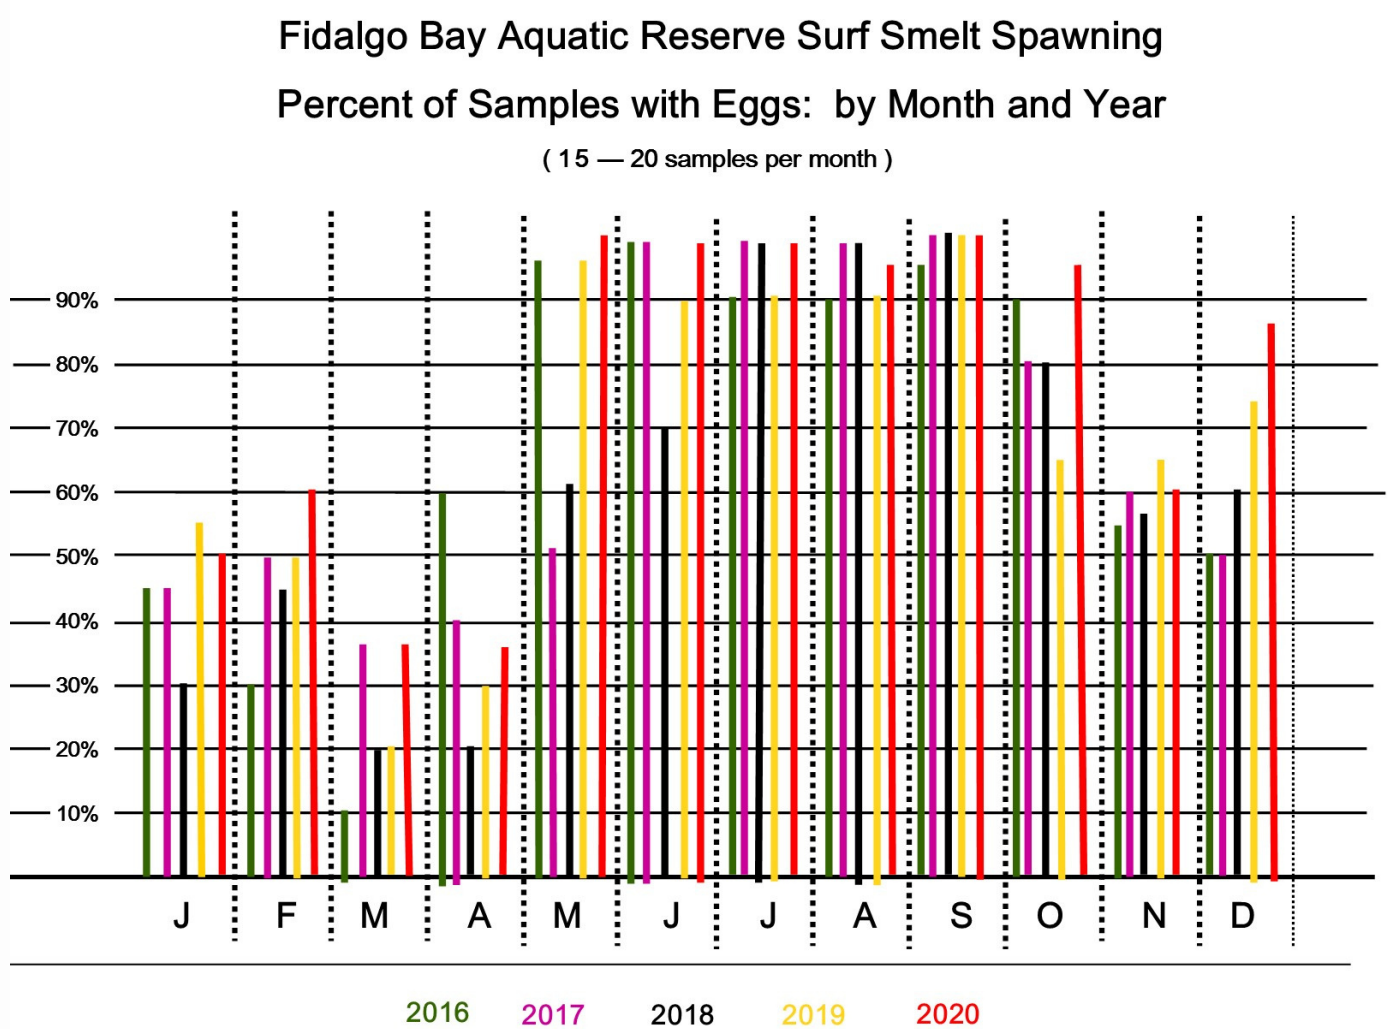

**THANK YOU TO ALL OF OUR WONDERFUL  
VOLUNTEERS. WE GOT THINGS DONE BECAUSE OF  
YOU!**

# DATA

Here are graphs of data collected over the years!

This graph shows the percent of samples each month that had eggs. Each month represents 15-20 samples per year. The pink bars show the average percent from 2013-2020, while the blue bars show the percent of samples just from 2020 that had eggs. 2020 was a good year for finding eggs!

This graph is a lot like the one above, but it has a bar for each year from 2016 to 2020 (red). The months where we see the most samples with eggs are between May and October, with December also being a good month.
