Application for Use of State-owned Aquatic Lands

Applicant Name: City of Everett
County: Snohomish County
Water Body: Snohomish River
Type of Authorization- Use: Right of Entry-Sediment Borings
Authorization Number: 23-087622
Term: 1 year

Description: This agreement will allow the use of State-owned aquatic lands for the sole purpose of conducting geotechnical sediment borings in support of the Everett Riverfront Public Amenities Project. It is located in the Snohomish River, in Snohomish County, Washington.

Posted August 8, 2011
APPLICATION FOR AUTHORIZATION TO
USE STATE-OWNED AQUATIC LANDS

The Applicant may not begin work on the project area until the State Department of Natural Resources (DNR) grants a Use Authorization.

I. SUBMISSION OF APPLICATION

DNR will review your application and post it on the DNR Leasing and Land Transactions website as public information. Instructions:

- Fill out the application by computer or by hand in blue or black ink.
- Send the completed form to the appropriate district office in the table below.
- Enclose a $25.00 non-refundable application processing fee with the application. This fee is not required for local, state, and other government agencies.
- DNR will notify applicants in writing if the application is accepted for further review, and may reject the application at any time prior to the signed execution of a use authorization.
- Your project may require regulatory permits. Please do not apply for regulatory permits until you have discussed your proposal with your designated land manager.

For additional information, contact the office that serves your county:

**Note:** DNR requires a legal property survey before they approve a use authorization. You do not need to furnish a survey now. The DNR survey requirements are included on this form.

Physical description of Project Area (For example, marsh, tidal flat adjacent to the Chehalis River, etc.): The geotechnical investigations will be conducted in the Snohomish River. The Snohomish River borders the Everett Riverfront District on the west from north of RM 5 to RM 7. At the proposed boring sites, the river consists of steeply sloped and diked banks, with areas of riprap revetment and occasional pilings. The extensive man-made earthen dikes have been in place since the mid-1930s and confine the limits and influence of the river. The water surface elevation of the river within the project area rises and lowers with the flow and ebb of the tides.

Name of owner(s) of uplands, shorelands, and/or tidelands shoreward and adjacent to the Property:

Oliver McMillan Development Inc; 733 8th Ave, San Diego, CA 92101

Oliver McMillan Everett, LLC; 2907 Hewitt Ave, Everett WA 98201

BNSF Railway- NW Division; 2454 Occidental Ave S, Ste 2d Seattle, WA 98134

Washington Department Of Transportation; PO Box 330310 Seattle, WA 98133

Address: see above

Phone Number:  
Fax Number:  
E-mail:  

**Note:** DNR may require proof of ownership, or authorization to use the adjacent tideland, shoreland, or upland property, except for established Harbor Areas.

Attach a copy of the deed if you own the adjacent upland property.

County parcel numbers for adjacent upland, and/or tideland properties: 576001500002, 29052900400300, 439901100000, 576000100001, 576000100002, 576000200002

V. USE OF PROPERTY

Describe the proposed use of the Property in detail:

The City of Everett, Department of Engineering and Public Services is proposing to complete geotechnical investigations (borings) within the Snohomish River to approximately 50 feet below the mudline. The borings will be drilled in two locations within the Snohomish River between river mile (RM) 5 and RM 7: 1) offshore of Waterfront Park-aligned with 36'h Street, approximately 0.25 mile east of 1-5 (North Boring Location); 2) offshore of Bigelow Creek outfall - aligned with 49th Street SE, approximately 0.5 mile east of 1-5 (South Boring Location). See Exhibit A, Locator Map.
Drill equipment will be placed on a barge at an offsite location (likely the tug company’s dock) and the barge will be towed to the boring location by a tugboat. The barge will be moved into position for the drilling operation and held in place by spuds and/or anchors.

The geotechnical investigations are in support of the Everett Riverfront Public Amenities project, which is a public/private partnership to increase public access to the Snohomish River and its shoreline. The purpose of the borings is to obtain information for the design of the Waterfront Park new floating dock and debris collector, and habitat restoration associated with the South Wetland Complex. The floating dock will provide access to the water for fishing, car-top boat launching, wildlife viewing, and other water-dependant recreational activities. The South Wetland Complex work includes habitat enhancements, water quality enhancements, and excavation to reestablish hydrologic connectivity and tidal influence within the South Wetland Complex. Any future development (e.g., the floating dock and debris deflector) would be the subject of a separate aquatic use authorization request from DNR.

Do you plan to sublease the Property? Yes ☐ No ☑ If yes, submit a copy of the sublease.

Do you know the current and past uses of the site? Please describe them here.

The Snohomish River is a navigable water of the U.S.

The Riverfront District is a 211-acre amalgamation of existing wetlands, railroad, post-industrial, and former landfill properties on the banks of the Snohomish River. Historically, the Snohomish River in the project area was used for industry, primarily transportation and handling facilities related to logging operations and three large wood-products mills. The mills had generally ceased operation by the 1960s.

Do you know of any toxic or hazardous substances on the site or past situations that could have caused contamination? Yes ☑ No ☐ If yes, please explain:

Since the early 1900s, Port Gardner and the lower Snohomish River have been used for commercial and industrial purposes, often related to timber and maritime industries (saw mills, paper production, and boat building). In the last 25 years, several sediment investigations have detected metals, semivolatile organic compounds, pesticides, and polychlorinated biphenyls (PCBs) at levels exceeding the Sediment Management Standards (SMS) at numerous locations within Port Gardner and the lower Snohomish River.
VI. IMPROVEMENTS

Additions within, on, or attached to the land, or anything considered a fixture (RCW 79.105.060(6)). Examples include: pilings, dolphins, piers, wharves, buildings, pipelines and cables, and structures for bridges.

What improvements currently exist on the site? DNR may require photos.

Some elements of the previous industrial development along the river still occur on the site. These include an abandoned log crane in the Waterfront Park, remains of bulkheads, wharfs, piers, and old railroad trestles along the waterfront. There are also areas where buried foundations from early industrial development remain on the site.

No in- or over-water structures will be modified or affected by the proposed geotechnical investigations.

If there are improvements currently on the site, describe their condition.

See above

Will you remove or remodel any of the existing improvements? Yes [ ] No [ ]

Do you plan to construct any improvements? If yes, please describe:

Not as part of this request.

Is there any fill material on the site? Yes [ ] No [ ] If yes, please describe:

Not Applicable

Describe any habitat mitigation any permitting agency requires of you and where on this project it will occur:

All drilling, decontamination, and abandonment will be completed in accordance with WAC 173-160.

No long-term impacts to fish and wildlife would result from the proposed short-term, temporary geotechnical investigation activities. Drill holes will be sealed with Quickgrout, a bentonite clay suspension, as approved by the Washington Department of Ecology. The boring would not change the character of the river substrate. In addition, the borings will be subject to the conditions of a Hydraulic Project Approval (HPA) and Section 404 permit.

All answers and statements are true and correct to the best of my knowledge.
