Do I qualify for a Long-term Forest Practices Application (FPA)?

Answer these questions to see if you qualify for a long-term FPA:

1. Are you planning on converting your property to a use other than growing commercial timber in the next six years?
   [ ] Yes: You don’t qualify for a long-term FPA.
   - See page 3 for a list of DNR region offices and counties that they include. Contact the appropriate region to find out if you need to fill out a standard FPA.
   [ ] No: go to number 2.

2. Have you harvested from your ownership in the state of Washington, on average, less than 2 million board feet of timber per year in the last three years?
   [ ] Yes: Go to number 3.
   [ ] No: you aren’t a small forest landowner and don’t qualify for the long-term FPA. See RCW 76.09.450 for exceptions.
   - You must fill out a standard FPA form. Get standard FPA forms at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx) or contact the DNR region office that covers the area your property is located in. Reference: RCW 76.09.450

3. Do you certify that you do not expect to harvest more than an average of 2 million board feet of timber per year in the next 10 years?
   [ ] Yes. This qualifies you for the long-term FPA
   - Get long-term FPA forms at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx) OR
   - See page 3 for a list of DNR region offices and counties that they include. Contact the appropriate office and explain that you are a small forest landowner needing help with a Long-term FPA. The office will put you in touch with a field forester that works with small forest landowners.
   [ ] No: you aren’t a small forest landowner and don’t qualify for the long-term FPA. See RCW 76.09.450 for exceptions.
You must fill out a standard FPA form. Get standard FPA forms at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx) or contact the DNR region office that covers the area your property is located in.

Reference: RCW 76.09.450

### Laws and Rules

Copies of the laws and rules can be found on the DNR’s website and DNR Region Offices. See page 45 of these instructions for a list of frequently viewed pages on the DNR Forest Practices website, including links to laws and rules. The Revised Code of Washington (RCW) for forest practices are Chapter 76.09 RCW and Chapter 76.13 RCW. RCWs are state laws. Forest Practices rules are Washington Administrative Code (WAC) 222. The Forest Practices Board Manual provides technical advice to help follow the rules.

### Hazardous Leave Trees & Utility Lines

Trees that fall into any electrical utility lines have serious consequences. Not only can they injure people or property near the line, but hitting a line may cause power outages, surges, fires, and other damage. Downed lines still conducting electricity are especially dangerous. Leave trees left within a tree length and a half of electrical lines have the potential to fall into utility lines. This is a very serious situation and leave trees may need to be removed. If leaving trees within this area consult with the local utilities provider.

### Logger Safety Initiative (LSI)

The Logger Safety Initiative (LSI) is a partnership between private landowners, loggers, the DNR and the Department of Labor and Industries (L&I). The goal of LSI is to reduce the high frequency and severity of logging injuries by creating a culture of safety in the logging industry. Participating loggers have agreed to follow a rigorous safety plan, report new jobsites within 48 hours of beginning work and maintain their good standing with L&I and their industrial insurance (workers compensation) hours and thus lessen the unpaid premium exposure to landowners. For more information on LSI go to [www.LoggerSafety.org](http://www.LoggerSafety.org)

### Long-term Forest Practices Application Fees

Fees are charged only if you are harvesting timber. Harvesting timber includes salvaging snags, down wood, dying trees, or stumps. Make checks payable to the "Department of Natural Resources".

Note: Long-term FPAs can’t be for a use incompatible with growing timber (conversion to non-forestry use). Reference: WAC 222-12-035.

The fee is $150.00 for harvesting timber, salvaging wood, or selling wood and you are not converting the land to a use incompatible with growing timber.

The fee is $150.00 for renewing an approved application or notification.

The fee is $100.00 for small forest landowners that have harvested no more than an average volume of two million board feet per year during the three previous years, AND if the forest practices application/notification is for a single contiguous ownership of one or more parcels. See FPA/N question 3 instructions for more information.

The fee is $1500.00 if you are harvesting timber, and

- Converting the land to a use that is incompatible with growing timber; or
- The forest land is located inside the city limits or urban growth boundary.

EXCEPT the fee is $150.00 if the landowner provides:

- A letter signed by the landowner stating the landowner will not convert the land to a non-commercial forestry use for ten (10) years AND a written forest management plan approved by the DNR; OR
- A Conversion Option Harvest Plan (COHP) approved and signed by the county or city.

The fee is $0.00 if your forest practices permit does not involve harvesting timber, salvaging wood, or selling wood.

Application/Notification fees are no longer refundable. An additional fee will be charged when resubmitting an FPA/N more than 45 days after the application has been withdrawn.

Reference: RCW 76.09.065 and 76.09.450

(For use with WW LTA forms dated 5/9/2014)
Where can I get forms and maps?

You can download forms and maps from the Forest Practices website [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx) or get them from Region offices.

Help for Small Forest Landowners

The Small Forest Landowner Office serves as a resource for people who own forest land. Field foresters are located in regional offices around the state to offer the following types of assistance to small forest landowners:

- **Long-Term Application:** Landowners may apply for a Long-term Forest Practices Application (FPA) that will be valid for 4-15 years rather than the standard 3 year FPA. This application may require more work than the 3 year FPA, but allows the landowner more flexibility over time.

- **Forest Stewardship Program:** This program provides on-site forest management advice and help with the development of Forest Stewardship Plans. A stewardship plan could make you eligible for cost share, certification, or recognition programs.

- **Alternate plans:** These plans allow more flexibility than the forest practices rules typically allow for site specific management plans. All resources must still be adequately protected.

- **Forest Riparian Easement Program (FREP):** When harvesting near a stream, a riparian forest buffer is required to be left to protect the aquatic resource. FREP offers compensation to landowners for timber that is required by law to be left in the Riparian Management Zone.

- **Family Forest Fish Passage Program (FFFPP):** Many culverts on forest roads that cross streams are undersized and block fish passage. Fish passage barriers can be replaced with funding from the FFFPP.

- **Forest Practices Technical Assistance:** Landowners can find help with Forest Practices Applications and get answers to regulatory questions by contacting a regional office.

For more information, see our website [www.dnr.wa.gov/sflo](http://www.dnr.wa.gov/sflo) or contact one of the DNR Region Offices listed below:

Department of Natural Resources Region Offices

Overview of Long-term Forest Practices Application (FPA)

Small forest landowner Long-term FPAs will be reviewed in two steps with a written 5 Day Notice of Operation.

Step 1 Resources and Roads Assessment

1. **Step 1 Resources and Roads Assessment, Long-term FPA form.**
   - Instructions for this form start on page 6.
   - This step is only for resource and existing roads assessment.
     - Resource topics included in this step: critical wildlife habitat, unstable slope features, streams, water bodies, wetlands, channel migration zones, historic sites, and archaeological sites.
     - Road topics included in this step: existing forest roads and their conditions within the area that you are including in a Long-term FPA. Assessment of potential fish blockages.

2. **Activity Maps**
   - Map information and requirements start on page 34.
   - Show locations of all resources and existing roads in the area that you want to include in a Long-term FPA as per the Step 1 form and instructions.
   - Use additional maps to help explain your assessment, if needed.
   - **NOTE: The following information must be on a separate map.**
     - Critical wildlife habitat. See WAC 222-16-080.
     - Archaeological sites
     - Historic sites

3. **Other documents** that may be needed for the assessment of resources and roads:
   - Water Classification Worksheet.
   - Water Type Modification forms are recommended, but not required.
   - Slope Stability Informational Form if you answer “yes” to number 4 or 5 of Step 1.
   - CMZ Assessment Form if you answer “yes” to number 6e of Step 1.
   - Marbled Murrelet form if you answered “yes” to number 4c of Step 1.
   - Informal Conference Note(s) from DNR staff regarding any site visits or discussions about Step 1.

4. **Time line:** The department will review Step 1 and issue a decision within forty-five days of receiving a complete resource and roads assessment.
   - You must have a “validated” Step 1 Long-term FPA before proceeding to Step 2.

Step 2 Resource Protection Strategies

1. **Step 2 Resource Protection Strategies, Long-term Forest Practices Application form.**
   - Instructions for this form start on page 14.
   - This step includes your harvest and road plans for the duration of your Long-term FPA.

2. **Activity Maps**
   - Map information and requirements start on page 34.
   - Show proposed harvest boundaries, buffers, and road work.
     - The Step 2 form and instructions explain what needs to be on the Activity Map.
       - Include information from your Step 1 Activity Map(s).
   - Use additional maps to help explain your proposal, if needed.
   - **REMINDER: The following information must be on a separate map.**
     - Critical wildlife habitat. See WAC 222-16-080.
     - Archaeological sites
     - Historic sites

3. **Other documents:**
   - The Step 2 form and instructions explain what other documents need to be included. They may include:
     - Qualified Expert report for timber harvest or road work on potentially unstable slope features
     - State Environmental Policy Act (SEPA) checklist or determination
     - Conversion Option Harvest Plan (COHP) from the local government
     - Alternate Plan(s)
     - Habitat Conservation Plan (HCP) or Watershed Analysis prescriptions and/or crosswalks
     - Hardwood Conversion form
     - Natural Regeneration Plan
Informal Conference Note(s) from DNR staff regarding site visits or discussions about Step 2.

Step 2, continued

4. **Permits from other agencies**, if required. Your Long-term FPA must be consistent with permits from other agencies.

   The form and instructions will tell you when you need to attach other permits. These may include, but aren’t limited to:
   - Bald Eagle Management Plans from U.S. Fish and Wildlife Service.
   - Any required local government permits (i.e. clearing or grading permits) if you answered yes to 5a.
   - Shorelines Substantial Development permits or a letter of exemption from the local government if you answered yes to 5d.
   - Cooperative Habitat Enhancement Agreement
   - Landowner Option Plan for Northern Spotted Owl
   - Archaeological Excavation and Removal permit from the Department of Archaeological and Historic Preservation. See WAC 222-25-048.

5. **Time line:** The department will review and approve, approve with conditions, or disapprove Step 2 within forty-five days of receiving a complete resource protection strategies portion of the long-term FPA.

   - Except if a detailed environmental statement is necessary, additional time for approval or disapproval as specified in RCW 76.09.050 will be required.
   - You must have an approved long-term FPA and give DNR a 5 Day Notice of Operation to start operations.

### 5 Day Notice of Operation

1. **5 Day Notice of Operation form:** this is a required written notice to the DNR.
   - Instructions begin on page 32.
   - Specifies operating time frame of specific forest practice activities.
   - The information in your Notice(s) must be consistent with the information included in your long term FPA. A Notice isn’t a request for an amendment.

2. **Activity Map**
   - Show specific harvest boundaries and road activities for the Notice.
     - Include relevant information from your Step 1 and 2 Activity Maps.
   - **REMININDER:** The following information must be on a separate map.
     - Critical wildlife habitat. See WAC 222-16-080.
     - Archaeological sites
     - Historical sites

Reference: WAC 222-20-020(1)(d), WAC 222-20-016,
How do I fill out Step 1 of the long-term FPA?

Your application must be legible for electronic scanning. Please:

- Type or use ink
- Do not use whiteout. If you make mistakes, cross them out and initial your changes.
- Do not write in the margins
- There is room for comments on the last page of the form. You may add pages if you need more writing space. Include the number to which each comment refers.
- If you need assistance, see page 3 for information.

1. Landowner

Print the name, address, and telephone number of the landowner. An email address is optional. DNR will mail a “Notice of Decision” to the landowner.

IMPORTANT NOTE: You will get either a “Validated” or “Rejected” decision for Step 1. If you get a validated Step 1 you may proceed to Step 2 Resource Protection Strategies of the long-term FPA. A VALIDATED STEP 1 IS NOT AN APPROVED FPA. If you get a rejected Step 1 the region office will list the reasons on the “Notice of Decision.”

Contact person

Print the name and telephone number of the primary contact person. An email address is optional. This person will be contacted only during application processing. DNR will not send copies of the approval or disapproval to the contact person.

2. Landownership information:

a. [ ] No  [ ] Yes Are you a small forest landowner per RCW 76.09.450?

   A. Have you harvested from your ownership in the state, on average, less than 2 million board feet of timber per year in the last three years?
      Yes. Go to B
      No. Check No to question 3a. Your FPA fee is $150.00

   B. Do you certify that you do not expect to harvest more than an average of 2 million board feet of timber per year in the next 10 years?
      Yes. Check Yes to question 3a. Go to question 3b.
      No. If no, don’t use this form; use the standard FPA/N form. See RCW 76.09.450.

b. [ ] No  [ ] Yes Is your entire proposed harvest area on a single contiguous ownership consisting of one or more parcels?

   A. Is your entire proposed harvest area on a single parcel?
      Yes. Check Yes to question 3b. Your FPA fee is $100.00
      No. Go to B

   B. Is your entire proposed harvest area on contiguous ownership of one or more parcels?
      Yes. Check yes to question 3b. Your FPA fee is $100.00
      No. Check No to question 3b. Your FPA fee is $150.00 Go to C

   C. Does your FPA/N includes more than one (1) harvest unit, that does not touch AND you have identified more than one parcel number in number 3? If yes, attach a map that shows your ownership between the harvest units. See map examples on page 36.

3. What are the legal descriptions of the areas included in this assessment?

Example:

<table>
<thead>
<tr>
<th>¼ ¼ (quarter quarter)</th>
<th>Section</th>
<th>Township</th>
<th>Range</th>
<th>E/W</th>
<th>Tax Parcel Number</th>
<th>County</th>
</tr>
</thead>
<tbody>
<tr>
<td>SW, NE</td>
<td>28</td>
<td>17</td>
<td>3</td>
<td>E</td>
<td>1703028012345</td>
<td>Pierce</td>
</tr>
</tbody>
</table>

Enter the legal description(s) of the locations of your forest practices. If you don’t know the information required in this section, see your property deed or contact the county assessor’s office. Enter the 40-acre sub-division (for example, NW¼ NW¼), the section, township, range (East or West), and county.
4. Are there potentially unstable slopes or landforms within the boundaries of your forest practices activity area?
   [ ] No  [ ] Yes – attach geotechnical report and “Slope Stability Informational Form”. If applicable, attach the SEPA checklist, HCP or Watershed Analysis prescriptions.
   • See Board Manual Section 16 for information on assessing and identifying areas for slope stability.
   • The “Slope Stability Informational Form” can be found on page 45 of the instructions.

References: WAC 222-16-050, WAC 222-10-030, WAC 222-12-041, WAC 222-22

5. Are there potentially unstable slopes or landforms adjacent* to your forest practices activity area?
   [ ] No  [ ] Yes – complete and attach the “Slope Stability Informational Form”. If applicable, attach geotechnical report, HCP or Watershed Analysis prescriptions.
   • See Board Manual Section 16 for information on assessing and identifying areas for slope stability.
   • The “Slope Stability Informational Form” can be found on page 44 of the instructions.

* For the purposes of this form, adjacent means the area of influence that could re-activate a potentially unstable slope or landform.

References: WAC 222-16-050, WAC 222-10-030, WAC 222-12-041, WAC 222-22

6. Is the area included in this assessment: (Answer each question)
   a. [ ] No  [ ] Yes  Within 500 feet of a public park? Park name: ____________________
      If you answered “Yes” enter the name of the public park.
      References: WAC 222-20-100(1)
   b. [ ] No  [ ] Yes  Using forest roads that are included in a Road Maintenance and Abandonment Plan (RMAP)?
      • If Yes, what is the RMAP number? ____________________
        For any forest roads that aren’t included in an RMAP complete number 8, Road Assessment
        • If “Yes,” enter the number assigned to the RMAP in the space provided.
        o NOTE: You still need to fill out the Road Assessment if you have a small forest landowner RMAP Checklist as opposed to a standard RMAP. See instructions for number 8.
        o Small forest landowners have the option of doing a standard RMAP.
        • If you do not have a standard RMAP:
          o Complete number 8. Road Assessment.
          o Show the locations of and identify all existing roads, along with their identifiers, on the Activity Map.
          Show the locations of all spoils areas and rock pits on the Activity Map.
          • If you don’t know, contact the appropriate DNR Region listed on page 3.
   c. [ ] No  [ ] Yes  Within 50 miles of saltwater, and do you own more than 500 acres of forest land in Washington State? If Yes - include the “Marbled Murrelet Form” or attach/reference HCP prescriptions.
      Mark “Yes” and complete the Marbled Murrelet form only if:
      • The area included in Step 1 is within 50 miles of saltwater, and
      • You own 500 acres or more forest land in Washington State, and
      • You don’t have an approved state and/or federal conservation agreement with prescriptions that include the marbled murrelet. If you have an agreement, submit a copy of the prescriptions (or reference the prescriptions on file at the DNR region office) and list the forest practices rules that are being substituted.
   d. [ ] No  [ ] Yes  Including areas of critical wildlife habitat? If yes, document types of habitat and their locations on a separate Activity Map from the one(s) used for the rest of your assessment.
      • If you mark “Yes”, show the location of nest sites, den sites, breeding sites, and roosting sites on a separate Activity Map.
      • Finding critical habitats will help you plan your activities in Step 2. Failure to identify critical habitats could delay processing Step 2 of the Long-term FPA.
      • The Washington Department of Fish and Wildlife (WDFW) can assist you in locating known information. A field
inspection will be necessary. WDFW website: http://www.wdfw.wa.gov or call (360) 902-2200. Species information is available at http://wdfw.wa.gov/mapping/phs/

Reference: WAC 222-16-080

e. [ ] No [ ] Yes In or directly adjacent to a potential Channel Migration Zone (CMZ)? If Yes – include the “CMZ Assessment Form”.

If there is a potential CMZ on or directly adjacent to the proposal area, the “CMZ Assessment Form,” found on page 46 of the Instructions, must be completed and attached to the FPA. See Board Manual Section 2 for information on assessing and identifying CMZs.

7. Streams, Lakes, and Ponds inventory. List each one separately. Show them, along with their Identifiers, on your Activity Map.

Example:

<table>
<thead>
<tr>
<th>Stream Segment, Lake, or Pond Identifier</th>
<th>DNR Mapped Water Type</th>
<th>Field Verified Water Type (see instructions)</th>
<th>Site Class, Type S or F water, only (see instructions)</th>
<th>Bank Full Width (feet)</th>
<th>Length (feet)</th>
<th>Is there a CMZ? (Y or N; see instructions)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>F</td>
<td>F</td>
<td>I</td>
<td>100’</td>
<td>500’</td>
<td>N</td>
</tr>
<tr>
<td>B</td>
<td>F</td>
<td>F</td>
<td>II</td>
<td>2’</td>
<td>1050</td>
<td>N</td>
</tr>
<tr>
<td>C</td>
<td>F</td>
<td>Np</td>
<td>II</td>
<td>75’</td>
<td>650</td>
<td>Y</td>
</tr>
<tr>
<td>D</td>
<td>N</td>
<td>F</td>
<td>III</td>
<td>4’</td>
<td>1200</td>
<td>N</td>
</tr>
</tbody>
</table>

**Stream Segment, Lake or Pond Identifier**

Enter a unique identifier for each stream segment, lake, or pond. Use numbers or letters other than “S”, “F”, or “N.” Identify the features on the Activity Map by using the identifiers that you entered on the form.

**DNR Mapped Water Type**

Enter the water type (S, F, or N) as shown on DNR’s Activity Map. Enter this for each identifier. If DNR’s map doesn’t show streams or water bodies for the segment you are identifying, leave this box blank or write “none."

Type S waters are “Shorelines of the State.” Local governments and the DNR both regulate shorelines. See the instructions for number 5d of Step 2 on page 15 for more information.

Reference: RCW 90.58.140

**Field Verified Water Type**

Enter the actual water type (F, Np, or Ns) as verified in the field. Enter only one water type per identifier. You must verify type N waters or any water bodies that exist in the field but not on DNR’s map. You don’t need to verify type S waters.

- See Water Typing Requirements on page 38 and the Water Type Classification Worksheet on page 39.
- NOTE: Leave this column blank for Type S waters. These are determined by the Department of Ecology (DOE) and can’t be changed by any person or agency other than the DOE.
- Changing a type F stream requires an interdisciplinary team meeting conducted by DNR Forest Practices staff. A Water Type Modification form must be turned in if you want a change to show on DNR’s maps. Download these forms from the Forest Practices web site or get them from a DNR region office.
- Water Type Modification Forms are recommended for verification of all type N waters, water type changes from type F to type N, and for indicating water type breaks from type F to type N. See page 3 for assistance.

**Site Class**

Enter site class only for type S or F streams. Refer to DNR’s site class maps. These are available from the Forest Practices web site and DNR region offices.
Bank Full Width (BFW)
Enter the BFW in feet of the stream, lake, or pond. As defined in the Forest Practices Board Manual Section 2, bankfull width means:

(a) For streams - the measurement of the lateral extent of the water surface elevation perpendicular to the channel at bankfull depth. In cases where multiple channels exist, bankfull width is the sum of the individual channel widths along the cross-section.
(b) For lakes, ponds, and impoundments - line of mean high water.
(c) For tidal water - line of mean high tide.
(d) For periodically inundated areas of associated wetlands - line of periodic inundation, which will be found by examining the edge of inundation to ascertain where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland.

Length
Enter the segment length, in feet, of:
- The stream or stream segment
- Lake or pond border, in whole or part.
- When determining segment extents, consider the following:
  - Water type breaks
  - Site class changes
  - Stream confluences
  - Future considerations for Step 2, Resource Protection Strategies
    • Changes in stream widths that effect riparian management zone widths
    • Changes management prescriptions (i.e. an alternate plan prescription vs. standard rules)

Is there a CMZ?
Enter “Yes” or “No.”
CMZ stands for channel migration zone. As defined in WAC 222-16-010, channel migration zone “means the area where the active channel of a stream is prone to move and this results in a potential near-term loss of riparian function and associated habitat adjacent to the stream, except as modified by a permanent levee or dike. For this purpose, near-term means the time scale required to grow a mature forest. See Forest Practices Board Manual Section 2 for descriptions and illustrations of CMZs, delineation guidelines.
If a CMZ is present in your proposed activity area, provide the details of the physical and historical evidence used to delineate the CMZ on the ground on a separate 8 1/2 by 11 inch piece of paper. Show the location of the CMZ on the Activity Map.
See Forest Practices Board Manual Section 2 for guidance.

Show the following on your Activity Map:
- Field verified water types: verify type N waters shown on the Activity Map.
- Draw in all streams that are on the ground, but not printed on the Activity Map.
- Cross out (draw a series of “x’s” or hatch marks) typed waters that are shown on the map, but don’t exist on the ground.
- Or, you may map the features using GIS and the map standards on page 34. If you use a GIS map of your own creation, DNR may ask you to also include a DNR Activity map and circle the area that you are referencing.

Reference: WAC 222-16-030

(For use with WW LTA forms dated 5/9/2014)
8. **Wetlands Inventory.** List each wetland separately. Show the boundaries of each wetland, along with its Identifier, on your Activity Map. Include all type A and B wetlands that are within 200 feet of the area covered by Step 1. Don’t include forested wetlands that are less than 3 acres in size.

**Example:**

<table>
<thead>
<tr>
<th>Wetland Identifier</th>
<th>Wetland Type (A, B, or Forested)</th>
<th>Total Wetland Area (acres)</th>
</tr>
</thead>
<tbody>
<tr>
<td>W1</td>
<td>A</td>
<td>2.5</td>
</tr>
<tr>
<td>W2</td>
<td>B</td>
<td>0.5</td>
</tr>
<tr>
<td>W3</td>
<td>Forested</td>
<td>4.5</td>
</tr>
<tr>
<td>W4</td>
<td>Forested</td>
<td>4.0</td>
</tr>
</tbody>
</table>

**Wetland Identifier.**
- Enter a different wetland identifier for each wetland.
- Include type A and B wetlands within 200 feet of the area included in Step 1.
- Don’t list forested wetlands that are less than 3 contiguous acres in size.

**Wetland Type.**
Enter the type of each separate wetland. See WAC 222-16-035.

**Total Wetland Area.**
Enter the total area (contiguous acres) of each wetland.

**Show the following on your Activity Map:**
- Wetland boundaries, along with their identifiers, of each wetland listed on the inventory. You don’t need to show forested wetlands less than 3 contiguous acres.

**References: Forest Practices Board Manual Section 8, WAC 222-16-035, 222-30-020 (6), (7), and (8)**

9. **Sensitive Site Inventory for Type Np waters.** List each site separately and show it, along with its Identifier, on your Activity Map.

**Example:**

<table>
<thead>
<tr>
<th>Site Identifier</th>
<th>Type of Site</th>
<th>Describe how you marked sensitive sites on the ground.</th>
</tr>
</thead>
<tbody>
<tr>
<td>SS1</td>
<td>Headwater Spring</td>
<td>Marked with orange plastic tags nailed to trees around the edge of the spring.</td>
</tr>
<tr>
<td>SS2</td>
<td>Side-slope seep</td>
<td>Marked with orange plastic tags nailed to trees around the edge of the seep.</td>
</tr>
</tbody>
</table>

**Site Identifier:** List one identifier per site. Use letters and/or numbers.

**Type of Site:** See “sensitive sites” in general definitions, WAC 222-16-010. Enter one of the following:
- Headwall seep
- Side-slope seeps
- Type Np Water intersection or confluence
- Headwater spring
- Alluvial fans

**Describe how you marked sensitive sites on the ground:** List the colors and types of markers used to mark the features in the field. Mark the extents of each sensitive site in the field. Markings must be able to last fifteen years. You may list the coordinates and datum type in this space, but they aren’t required. If you choose to use GPS coordinates, you still need to mark the sites on the ground.

**Show the following on your Activity Map:**
- Locations, along with their identifiers, of each sensitive site listed on the inventory.

**Reference:** WAC 222-16-010 (see “sensitive sites”)
10. Roads assessment. Show roads, water crossings, spoil areas, and rock pits, along with their identifiers, on an Activity Map.

Example:

<table>
<thead>
<tr>
<th>Road Identifier</th>
<th>Date Assessed</th>
<th>Road issue assessed (see instructions for categories)</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A-100</td>
<td>10/15/2007</td>
<td>Water from the road or ditch runs directly into typed water</td>
<td>This is only for the east side of the road. Crosses one type F stream (fish passable).</td>
</tr>
<tr>
<td>A-300</td>
<td>10/15/2007</td>
<td>Water from the road or ditch runs directly into typed water.</td>
<td>Ditches have evidence of scour. Road crosses one type Ns and one type Np stream</td>
</tr>
<tr>
<td>A-400</td>
<td>10/2007</td>
<td>No issues</td>
<td>One type F and two type Np water crossings are up to forest practices standards.</td>
</tr>
<tr>
<td>C-1</td>
<td>10/16/2007</td>
<td>Water flows under, over or around the culvert</td>
<td>Type Np crossing on the A-300 road.</td>
</tr>
</tbody>
</table>

**Road Identifier:** Enter a road identifier for each road or location of a specific road section or water crossing being assessed. Include all existing forest roads within the area covered by Step 1.

**Exemptions from this section:**
- Forest roads included in a standard (large landowner) road maintenance and abandonment plan (RMAP). If you have a standard (large landowner) RMAP number, enter that number in the space provided after number 6b. A Small Forest Landowner Checklist RMAP is unacceptable, even if DNR assigned a RMAP number. Contact the region office if you have questions about this.
- Public roads such as state and county highways and city streets.

**Date assessed:** Enter the month and year the road or road segment was assessed.

**Road issue assessed:** Enter one of the categories from the list below.
- Water from the road or ditch runs directly into typed water.
- Water flows under, over, or around the culvert.
- The culvert keeps filling with dirt.
- The road has large cracks.
- The road has sinkholes. (Not a pothole, but a hole that you can't drive over.)
- Dirt from the uphill side of the road keeps falling into the ditch-line before regularly scheduled maintenance.
- Dirt for the cut-slope keeps falling downhill into or hear a stream, pond, or wetland.
- The road crosses typed water (a culvert, bridge, or ford exists).
- Other (explain).
- No issues.

**Comments:** Give details that will clarify the location and/or condition of the road or water crossing structure that you are assessing. Don’t include road maintenance schedules or work plans in this section. Reserve them for Step 2, Resource Protection Strategies. For assistance in accessing and correcting potential fish passage barriers see Small Forest landowner website at [http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_ffpp.aspx](http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_ffpp.aspx)

**ROAD MAINTENANCE OBLIGATIONS:** All forest landowners have a legal obligation to maintain all their forest roads on all their forest land to the extent necessary to prevent damage to public resources. Maintenance rules are in WAC 222-24-052. Best Management Practices (BMPs) for road maintenance are in the Forest Practices Board Manual Section 3. References: WAC 222-24-052, Board Manual Sec. 3,
11. **How are the following marked on the ground? (Flagging, paint, road, fence, etc)**

| F/N water type breaks: | Np/Ns water type breaks: |

Markings at water type breaks must be able to last 15 years. Use something durable such as metal or plastic tags or blazes on trees. GPS coordinates are recommended. If you use GPS coordinates, you must still mark the features in the field.

12. **Have you reviewed the proposed activity area to determine if it may involve historic sites and/or Native American cultural resources?** *Read the instructions carefully before answering this question.*

[ ] No [ ] Yes

Mark Yes if you have checked the area where you plan to conduct your forest practices activities for the presence of cultural resources. See information below.

Forest Practices rule **WAC 222-16-010** defines cultural resources as:

- “archaeological and historic sites and artifacts, and traditional religious, ceremonial, and social uses and activities of affected Indian tribes”.

Areas most likely to contain cultural resources may include the following:

- Along defined ridge lines and at saddles
- Areas near natural water including shorelines and terraces
- Around rock outcrops and talus (rock rubble) slopes
- In cedar tree stands and aspen stands containing older, scarred trees
- Near springs and old wells
- Around extractable mineral sources
- Areas in proximity to known cultural sites

Examples of potentially important cultural resources:

- Native American graves and cairns (stacked rocks); historic graves and cemeteries (Protected by **RCW 27.44.040 and chapter 68.60 RCW**)
- Glyptic records (designs, names, dates carved or painted on rock) (Protected by **RCW 27.44.040** and **RCW 27.53.060**)
- Native American old camp and village sites; old cabins, barns, sheds, logging/mining/railroad camps, mills, mining operations, and their remnants
- Arrowheads, other stone tools, and the stone flakes from making them; old fire pits, fire hearths, wood stoves, cans, bottles, ceramics, bricks, metal, lumber
- Old trails, wagon roads, railroad grades, ditches, and utility lines
- Caves, rock overhangs, and rock shelters historically used by humans; old rock walls, and old pits in talus slopes
- Culturally modified trees (trees modified by humans) such as old stripped bark, trunk with old blaze, name, date, drawing

**NOTE:** Most Native American cultural resources are not recorded in any state or local database. Before you submit your FPA/N, you are encouraged to contact the affected Indian Tribe(s). For Tribal contact information, go to **DNR Forest Practices Activity Mapping Tool** or contact your DNR Region office.

Your FPA/N will be screened to determine whether it may involve cultural resources.

- If your FPA/N involves cultural resources, **WAC 222-20-120** includes options for meeting with the affected Indian Tribe(s) with the objective of agreeing on a protection plan. Your DNR Region office will tell you which Tribe(s) you need to contact and how to document your communication with the Tribe(s).
- If the cultural resource is an archaeological site, contact the Department of Archaeology and Historic Preservation at **www.dahp.wa.gov** to see if you need their Archaeological Excavation and Removal permit. See **chapter 25-48 WAC**.
- Note: If you, DAHP, and the affected Tribe(s) have already agreed upon a protection plan for the cultural resources in your activity area, please note this in the Additional Comments section of the FPA/N form.
13. Additional Information: *(This is optional. You may add extra pages if needed.)*

You may include additional information in the space provided or on a separate page. Include the number that each comment refers to. You may also include multiple maps to help explain your assessment.

**Landowner signature block:** The Landowner must legibly print and sign their name and record the date of signature before this Long-term FPA can be accepted. Stamped signatures and/or electronic signatures are not acceptable.

*NOTE: If you are a “Perpetual Timber Rights Owner,” and are submitting this without the Landowner’s Signature, provide written evidence the landowner has been notified.*

A perpetual timber rights owner does not own the land, but has permanent rights to all the timber on the land. They may submit Step 1 of the Long-term FPA without the forest landowner’s signature if:

- The perpetual timber owner’s name is in the landowner block in number 1;
- The perpetual timber owner signs Step 1 of the Long-term FPA as the landowner;
- The perpetual timber owner gives DNR proof that the forest landowner has a copy of the Long-term FPA.

References: RCW 76.09.067
How do I fill out Step 2 of the Long-term FPA?

Your application must be legible for electronic scanning. Please:

- Type or use ink
- Do not use whiteout. If you make mistakes, cross them out and initial your changes.
- Do not write in the margins
- There is room for comments on the last page of the form. You may add pages if you need more writing space. Include the number to which each comment refers.
- If you need assistance, see page 3 for information.

1. **Landowner:** Print the name, address, and telephone number of the landowner. An email address is optional. DNR will mail a “Notice of Decision” to the landowner.

   **IMPORTANT NOTE:** You will get either a “Validated” or “Rejected” decision for Step 1. If you get a validated Step 1 you may proceed to Step 2 Resource Protection Strategies of the Long-term FPA. A VALIDATED STEP 1 ISN’T AN APPROVED FPA. If you get a rejected Step 1 the region office will list the reasons on the “Notice of Decision.”

   **Contact person:** Print the name and telephone number of the primary contact person. An email address is optional. This person will be contacted only during application processing. DNR will not send copies of the approval or disapproval to the contact person.

2. **Long-term FPA number:** ___________________

   This is the number DNR assigned to your Step 1, Resource and Roads Assessment.

   Enter the FPA number printed on the Decision Page DNR sent you to validate Step 1 of your Long-term FPA. If you didn’t get a Step 1 validation, call the region office to check the status of your Long-term FPA. You can’t submit Step 2 without a valid Step 1.

   Reference: WAC 222-20-016(2)(b)

3. **For how many years do you want this Long-term FPA to be valid?** _______ years

   Long-term FPAs are valid from 4 to 15 years.

   Enter a number from 4 to 15 for the number of years that you want a valid Long-term FPA.

4. **Are you selling standing timber?**

   - [ ] Yes   - [ ] No

   If Yes, record your Forest Tax Registration Account Number:

   Contact the Washington State Department of Revenue’s Forest Tax Program to look up an existing Forest (timber) tax number or to apply for a new one. Their phone number is 1-800-548-8829. You can get tax forms and information from their website at: [http://www.dor.wa.gov](http://www.dor.wa.gov).

5. **Is this forest practice application? (Answer each question)**

   a. [ ] No   - [ ] Yes  Within the city limits or inside an urban growth area? If Yes, SEE INSTRUCTIONS FOR ADDITIONAL REQUIRED DOCUMENTS.

      If you do not know if the property is located within a city or an urban growth area, contact your county planning department or assessor’s office.

      If you answered “Yes,” include one of the following:

      - A SEPA Environmental Checklist or SEPA Determination, and copies of approved clearing and grading permits from the local government (if required). Make sure your Long-term FPA reflects any SEPA conditions.
      - A Conversion Option Harvest Plan (COHP). See number 5c.
      - A signed statement of intent to keep the property in forestry for 10 years. Include also a 10 year management plan if your Long-term FPA is valid for less than 10 years.

      References: RCW 76.09.050(1), WAC 222-16-050(2)(d).

   b. [ ] No   - [ ] Yes  Within a public park? If Yes, include SEPA Environmental Checklist or SEPA Determination - except for harvesting/salvaging less than 5,000 board feet within a developed public park.

      If you answered “Yes”, a SEPA Environmental Checklist or SEPA Determination is required unless you are harvesting/salvaging less than 5,000 board feet within a developed public park. Make sure your Long-term FPA reflects any SEPA conditions.

      References: WAC 222-16-050(1)(c).

   c. [ ] No   - [ ] Yes  Include an approved Conversion Option Harvest Plan (COHP) from the local government? If yes, include a copy.

      A COHP is a local government approved plan that allows you to harvest your timber and keep the option to either convert or replant it. Not every local government allows COHPs. Contact the local government planning department for more information.
If you answered "Yes", include a copy.

References: WAC 222-16-010.

d. [ ] No [ ] Yes

Within 200' of the Ordinary High Water Mark (OHWM) or floodway of Type S water?

If yes, check with the county or city to determine whether a substantial development permit is required under the local shorelines master plan.

Within 200' of the Ordinary High Mark (OHWM) or floodway of type S water? If yes, check with the county or city to determine whether a substantial development permit is required under the local shorelines master plan.

Type S waters are considered "Shorelines of the State." and are shown on the DNR Activity Map. Counties and cities regulate activities within 200 feet of "Shorelines of the State". If you are conducting activities within 200 feet of a "Shoreline of the State" you must:

- Contact the county or city in which your property is located to verify that proposed activities are in compliance with the local shorelines master plan. Your FPA/N needs to reflect any requirements of the shorelines master plan.
  - If the county or city requires a substantial development permit for your activity, it must be obtained prior to conducting forest practices.

Reference: RCW 90.58.140, WAC 222-50-020(3)

e. [ ] No [ ] Yes

Include an Alternate Plan? If yes, include a copy.

An alternate plan offers alternatives to certain Forest Practices rules.

If you answered "Yes", include copies of one of the following:

- A plan fulfilling the requirements listed in WAC 222-12-0401(3), contents of alternate plans
- OR Template prescriptions (i.e. “overstocked stand template”) for small forest landowners.

Reference: WAC 222-12-040, 222-12-0401, 222-12-0403, and Forest Practices Board Manual Section 21

6. Are you substituting prescriptions from an approved state or federal conservation agreement or watershed analysis?

[ ] No [ ] Yes

If you answered "Yes", include a copy of one of the following:

- A plan fulfilling the requirements listed in WAC 222-12-0401(3), contents of alternate plans
- OR Template prescriptions (i.e. “overstocked stand template”) for small forest landowners.

Reference: WAC 222-12-040, 222-12-0401, 222-12-0403, and Forest Practices Board Manual Section 21

7. Is the taxpayer eligible for the EARR Tax Credit?

If you are paying state forest excise taxes on this timber harvest and your harvest is impacted by certain forest practices rules, you may be eligible for a tax credit. State law requires the applicant to answer this question and for DNR to verify it. DNR’s verification is on the Notice of Decision Page.

- Answer “Yes” if any portion of your timber haul route is within an approved Road Maintenance and Abandonment Plan (this includes small forest landowner Checklist RMAP).
- Answer “Yes” if this timber harvest is limited due to the Forest Practices rules, Habitat Conservation Plan, or Approved Watershed Analysis in the following areas:
  - Riparian areas
  - Wetlands
  - Steep or unstable slopes
- Answer "No" if none of the above apply.

References: RCW 84.33.0775

If not working in or over typed waters, skip to number 12

NOTE: See Board Manual Section 5 for guidance related to hydraulic projects. Consultation with the Department of Natural Resources (DNR) and Department of Fish and Wildlife (WDFW) is recommended prior to submitting an FPA including hydraulic projects in Type S or F Water to ensure all important factors are addressed for your particular project. Tribes may also be consulted for additional expertise.

8. Are you proposing any of the following projects NOT permitted by current HPAs from WDFW?

Answer questions a, b and c for all projects in or over Type S and F Water you propose to be permitted by the FPA/N. Do not include projects currently permitted by an existing HPA from WDFW.

Note: If the answer is yes to one or all of questions a through c, WDFW will conduct a concurrence review of your plan per WAC 222-20-017(4)(b). DNR will facilitate this review.

a. [ ] No [ ] Yes

Installing, replacing or repairing a culvert at or below the bankfull width of Type S or F Water(s) that exceeds a five percent gradient?
b. [ ] No  [ ] Yes  Constructing, replacing, or repairing a bridge at or below the bankfull width of unconfined streams in Type S or F Water(s)?

c. [ ] No  [ ] Yes  Placing fill material within the 100-year flood level of unconfined streams in Type S or F Water(s)?

9. Have you consulted with DNR and/or WDFW about the proposed hydraulic project(s)?
[ ] No  [ ] Yes  Consultation with DNR and WDFW prior to submitting an FPA with a hydraulic project in Type S or F Water is recommended. Answer the question for projects you propose to be permitted by the FPA/N. This question is not referring to consultation that was done for existing HPAs issued by WDFW. If applicable, please include documentation (ICN, etc.) of the consultation.

10. If installing, replacing, removing or maintaining structures in or over any typed water, complete the table below. Type S and F Waters require detailed plan information. Provide plan details in number 23 or attach plans to the FPA/N. Provide crossing locations and identifiers on your Activity Map. (A detailed plan with profiles may also be required for more complex hydraulic projects in Type N Waters per WAC 222-24-042(2)). Required elements of plan details can be seen in number 23. Reference WAC 222-24 and BM 5.

*Existing HPAs issued by WDFW will be complied and enforced by WDFW until expiration. Plan details are not required for hydraulic projects permitted with an existing HPA (see instructions).

** Fords on Type S and F Waters may result in an unauthorized incidental take of certain endangered or threatened fish species. For more information, see “Background for the state’s Incidental Take Permits for certain endangered and threatened fish species” following question #16 of the Instructions.

Crossing Identifier: This number, letter or combination of the two should correspond to the identifier you used to show the crossing location on the Forest Practices Activity Map. Enter one identifier per crossing. Do not use S, F or N.

Water Type: Indicate the water type for each crossing: S, F, Np or Ns.

Existing HPA number if applicable: If your project has an HPA issued by WDFW, enter the HPA number. Existing HPAs will be complied and enforced by WDFW until expiration. If the HPA expires before work is completed, you must submit a new FPA to complete the hydraulic project.

HPA expiration date if applicable: If you entered an existing HPA number, an associated expiration date must be entered.

Planned Activity: Identify what type of activity you are planning in or over water: Install, Remove, Replace or Temporary. Temporary structures must be installed and removed within the timeframe of the approved FPA. See Board Manual Section 5, Part 7 for temporary culvert best management practices. Reference WAC 222-24-041(5) and 222-24-042(3). Identify the maintenance structure: Bridge, Culvert or Ford. Information on Maintenance BMPs can be found in BM 5, Part 6, Water Crossing Structure Maintenance and Repair.

Structure: Identify the type of structure involved in the project: Culvert, Bridge, Ford, Puncheon, Arch or Other

Proposed Size: Enter the dimensions of the structure you are installing or replacing.

- Minimum structure sizes on Type S or F Waters will be evaluated by DNR based on fish protection standards per WAC 222-16-025.
- Minimum structure sizes in Type Np or Ns Waters:
  - Permanent culverts must be at least 24” for Type Np Waters and 18” for Type Ns Waters.
Structures must be large enough to pass 100-year flood level.
- Structures must be large enough so branches and debris will not plug them.
- There are two charts in Forest Practices Board Manual Section 5 to determine culvert sizes for Type N Waters.
- You may use either chart to help determine the appropriate culvert size. If a different method is used, it must be accepted by DNR.

**Culvert Design Method**: Enter the design method you used to determine culvert size in S and F Water: No slope, Stream-simulation or Hydraulic. If an alternate method is used (“Other”), it must be approved by DNR. Pre-application consultation is recommended. See BM 5 (4.5.2)

**Channel Bed Width**: Enter channel bed width for Type S and F Waters only. See Board Manual Section 5, Part 4 for a thorough description on how to determine channel bed width for the purpose of designing water crossings.

**Stream Gradient**: Enter the average channel gradient for Type S and F Waters only.

**RMAP Project**: If the project is part of your RMAP, enter Y. If not, enter N.

**FFPPP**: If you are planning to replace a culvert or bridge with funding from the Family Forest Fish Passage Program enter Y. If not, leave blank or enter N.

**Note for Small Forest Landowners**:
If you are a Small Forest Landowner who would like to enroll in the FFFPP or for more information visit the Small Forest Landowner Office website: [http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_overview.aspx](http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_overview.aspx) or call your local DNR region office.

**11. If conducting any of the following activities in or over type water, complete the table below. Some activities will require identifiers on your Activity map and/or more information in number 23, Additional Information. See instructions.**

<table>
<thead>
<tr>
<th>Activity</th>
<th>Type S Water</th>
<th>Type F Water</th>
<th>Type Np Water</th>

</tbody>
</table>

*Existing HPAs issued by WDFW will be complied and enforced by WDFW until expiration. Plan details are not required for hydraulic projects permitted with an existing HPA (see instructions).

** Fords on Type S and F Waters may result in an unauthorized incidental take of certain endangered or threatened fish species. For more information, see “Background for the state's Incidental Take Permits for certain endangered and threatened fish species” following question #16 of the Instructions.

Check each box that applies to your proposal based on activity and water type. The following activities require additional description in number 23 and/or may also need to be shown on the activity map.

- **Equipment Crossing**: If constructing equipment crossings over S or F water, you must add this information to number 16.
- **LWD Placement/Removal in Type S or F waters**: Describe whether LWD will be placed or removed from the stream, the area of the activity, whether hardwood or conifer is being placed and approximate diameters and lengths of LWD placement.
- **Cable Yarding**: Describe if wood will be yarded over or through the RMZ. If yarding through an RMZ describe:
  - Suspension: full, lead-end, etc.
  - Yarding corridors
- **Beaver Dam Removal**: Describe in number 23 and show on the activity map.
- **Felling and Bucking**: If felling and removing is expected along Type S or F Water, mitigation measures shall be implemented per WAC 222-30-050(1)(a). Describe these measures, unless applying a previously permitted HPA.
- **Other**: Describe in number 23. If applicable, show on activity map.

**12. If constructing or abandoning forest roads complete the table below. Show the road and crossing locations and identifiers on your Activity Map. Include abandonment plans for temporary roads and abandonment projects.**
### Example:

<table>
<thead>
<tr>
<th>Road Identifier (name, number)</th>
<th>Road Construction</th>
<th>Road Abandonment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Length (feet)</td>
<td>Steepest Side-slope (%)</td>
</tr>
<tr>
<td>1200 Rd</td>
<td>900</td>
<td>25</td>
</tr>
<tr>
<td>2400 Rd</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Road Identifier:** This is the same number or name of the road shown on your Activity Map.

**Road Construction:** This is new forest roads and any roadwork (except routine maintenance) outside an existing forest road prism.

**Length:** Enter the total road construction length (in feet), including temporary roads.

**Steepest Side Slope:** Enter the percent (%) of the steepest side slope (not road grade) crossed during construction.

**Road Abandonment:** Include temporary roads and existing roads you plan to abandon. You must include a written plan that shows how the road will be left to:

- Control erosion
- Maintain water movement within wetlands and other natural drainages
- Prevent four-wheeled highway vehicles from entering the point of closure
- Restore water crossings - such as remove culverts and fill, etc.

**Length:** Enter the total road abandonment length (in feet).

**Abandonment Date:** This is the date the abandonment will be completed by.

*Contact the DNR region office when your road abandonment is complete. If the abandonment is acceptable, DNR will send written approval.*

### 13. If depositing spoils and/or expanding or developing a rock pit for forestry use, complete the table below. Show their locations, along with their identifiers, on your Activity Map.

<table>
<thead>
<tr>
<th>Spoil Area Identifier (Number, Letter)</th>
<th>Cubic Yards of Spoils Deposited</th>
<th>Rock Pit Identifier (Name, Number, Letter)</th>
<th>Acres of New Rock Pit Developed</th>
<th>Acres of Existing Rock Pit Expanded</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>800</td>
<td>1</td>
<td>.5</td>
<td></td>
</tr>
</tbody>
</table>

**Spoil Area Identifier:** Enter the same number or letter of the spoil area that you show on your Activity Map.

**Cubic Yards of Spoils Deposited:** Enter the spoil volume in cubic yards. If you need to cut or remove timber, show this as a separate harvest unit in number 15.

**Rock Pit Identifier:** Enter the same name, number, letter of the pit that shows on your Activity Map.

**Acres of Rock Pit Developed:** This is the acres of new rock pit. *If you need a Surface Mine Reclamation Permit for this pit - do not include it on this chart - instead put the amount of timber that will be removed for the project in number 15.* Enter the acres of forest land that will be disturbed as part of the project. Show any timber cut as a separate harvest unit in number 15. If the new rock pit includes more than one forest landowner, each landowner will need to sign the Long-term FPA or submit separate FPAs.

**Acres of Rock Pit Expanded:** This is the acres of expansion of an existing rock pit. *If you need a Surface Mine Reclamation Permit for this pit - do not include it on this chart - instead put the amount of timber that will be removed for the project in number 15.* Enter the acres of forest land that will be disturbed as part of the expansion project. Show any timber cut as a separate harvest unit in number 15. If the rock pit includes more than one forest landowner, each landowner will need to sign the Long-term FPA or submit separate FPAs.

You must show the following on your activity map:

- Spoil areas and identifiers
- Locations and identifiers of new and expanded rock pits

References: WAC 222-24-060
14. If operating in or within 200 feet of a wetland, complete the table below. Show the boundaries of each wetland, along with its Identifier, and WMZ on your Activity Map.

<table>
<thead>
<tr>
<th>Wetland Identifier (Number, Letter)</th>
<th>Wetland Type (A, B or Forested Wetlands &gt; 3 acres)</th>
<th>Planned Activities in Wetland</th>
<th>Planned Activities in Maximum Width WMZ</th>
<th>Total Wetland Area (acres)</th>
<th>How many acres are you draining?</th>
<th>How many acres are you filling?</th>
</tr>

</table>

**Wetland Identifier:** Enter a different wetland identifier for each wetland. Show the identifiers on the activity map.

**Wetland Type:** Enter the type of each separate wetland. To determine wetland type, see WAC 222-16-035.

**Planned Activities in Wetland:** Enter the type of activity in each separate wetland. Enter ‘None’ if no activities are planned. For timber harvest restrictions, see WAC 222-30-020.

**Planned Activities in Maximum Width WMZ:** Enter the type of activity in each separate wetland management zone. Describe in number 23 the activities that will take place. Include your harvest strategy such as distribution of cut or leave trees, leave tree clumps, openings created, WMZ width dimensions, and felling and yarding methods. Wetlands that contain fish need to be buffered with either RMZ or WMZ’s that provide the best protection. Describe in number 23. WAC 222-30-020(7)

**Acres of Wetland:** Enter the total area (in acres) of each separate wetland.

**How many acres are you draining?** Enter the total acres of each separate wetland you will drain. If draining more than ½ an acre of an individual wetland, include a SEPA Environmental Checklist or SEPA Determination. For additional mapping and substitution requirements, see WAC 222-24-015.

**How many acres are you filling?** Enter the total acres of each separate wetland you are filling. If filling more than ½ an acre of an individual wetland, include a SEPA Environmental Checklist or SEPA Determination. For additional mapping and substitution requirements, see WAC 222-24-015.

You must show the following on your Activity Map:

- Wetland boundaries, types (forested, A, or B), and identifiers (how you marked it on your map) of all wetlands inside your forest practice and within 200 feet of your forest practice
- Wetland management zones (WMZs)

References: Forest Practices Board Manual Section 8, WAC 222-16-035, WAC 222-16-036, WAC 222-30-020(6), (7), and (8).

15. Complete the table below for timber harvest and/or salvage. Show all harvest areas, along with their Unit Numbers, on your Activity Map.

<table>
<thead>
<tr>
<th>Unit Number</th>
<th>Harvest Type (Even-aged, Uneven-aged, Salvage, Right-of-Way,)</th>
<th>Biomass Harvest (Y or N)</th>

</tr>
</tbody>
</table>

**Unit number.** Each individual harvest unit must have a unique unit number. An individual harvest unit may be crossed by roads or streams with single-wide RMZs and still be shown as one harvest unit. A harvest unit crossed by a double-wide RMZ must be shown as two individual harvest units and identified by different, unique unit numbers. Show the harvest unit number(s) on the activity map. Do not use letters or symbols. You may be asked to provide directions or a map to your harvest unit(s).

**Harvest Type.** Enter one or more of the following for each unit: Enter one of the following for each unit: Even-age, Uneven-age, Salvage, Right-of-Way, Even-age and Salvage, Uneven-age and Salvage Harvest, Right-of-Way and Salvage, Even-age and Right-of-Way, Uneven-age and Right-of-Way. See below and WAC 222-16-010 for definitions of each harvest type.

**Even-aged Methods:** See WAC 222-16-010 for a complete definition.
• Clearcut: If clearcutting on islands, see WAC 222-30-110.
• Seed tree: leave 20 or fewer trees per acre. Leave trees must be at least 10 inches in diameter with at least 1/3 live crown.
• Shelter-wood: leave 20 or fewer trees per acre. Leave trees must be at least 10 inches in diameter with at least 1/3 live crown.
• Shelter-wood: leave less than 150 trees per acre. Leave trees must be at least 5 years old or average 4 feet in height.
• Partial cutting: leave less than 50 trees per acre. Leave trees must be at least 10 inches in diameter with at least 1/3 live crown.
• Over-story removal: take more than 5, 000 bf per acre and leaving less than 50 trees per acre. The leave trees must be at least 10 feet high.
• Other methods: leave 6 or fewer trees per acre. Leave trees must be at least 10 inches in diameter with at least 1/3 live crown.

Uneven-aged Methods: Any removal of standing trees other than those listed under Even-aged Methods.

Salvage: removing snags, down logs, windthrow, stumps, bolts, dead or dying wood.
Right-of-way: areas harvested to allow for road construction, rock pit development or expansion, or deposition of spoils from road construction and/or rock pit development.

Biomass Harvest (Y or N): Enter Y if you are removing material to be transported for energy generation and N if not. Harvest Method: Enter one or more of the following for each harvest unit. If a cable harvest system is within the same unit as a ground based harvest system, provide details in the Additional Information section or indicate on a map which area will be utilizing a cable harvest system.

• Rubber Tired Skidder
• Tracked Skidder
• Dozer
• Shovel
• Full Suspension Cable
• Leading End Suspension Cable
• Helicopter
• Animal
• Chipper-forwarder
• Slash Bundler

Acres to be Harvested: Enter the number of acres harvested in each unit.

Volume to be Harvested (mbf): Enter the volume in thousand board feet (mbf) that will be harvested (includes salvage). Example: 13,000 board feet = 13 mbf.

Volume to be Harvested (tonnage): Enter the tonnage of biomass material that will be harvested. Volume to be Harvested (salvage only) (%): Enter the percent (%) of the volume to be salvaged for each unit.

Steepest Slope in Harvest Unit (%): Enter the percent (%) of the steepest slope within the unit.

You must show the following on your Activity Map:

• Unit Boundaries, along with their identifiers.
• Clumped WRTs and GRTs
• Landings on cable units

References: WAC 222-16-010 and WAC 222-24-060

If not using the exempt 20 acre parcel RMZ rule, skip to number 19.

16. If using the exempt 20-acre parcel RMZ rule on type S, F, or Np waters answer the following questions. Show all RMZs on your Activity Map.

a. Was this parcel 20 acres or less before June 5, 2006?
   Yes: Go to 16b
   No: Your parcel is not authorized, unless you use the RMZ buffers in numbers 19 and 20.

b. Have you owned less than 80 forested acres on or before June 4, 2006?
   Yes: You are authorized if you use the 20-acre exempt RMZ rule.*
   No: If you use the 20-acre exempt RMZ rule on any of your forest land, you are not authorized under DNR’s Incidental Take Permits. You will be authorized if you use the RMZ buffers in numbers 19 and 20.
This authorization is subject to change depending on changes to habitat. Please contact your local DNR Region office for more information.

- See WAC 222-30-023 for 20-acre exempt rules. Answer questions 1-5 below to see if you qualify to use this rule.

Answer these questions to see if you qualify to use the exempt 20-acre riparian management zones (RMZs).

1. Has the water type been field verified?
   - Yes: Go to 2
   - No: Contact your local DNR region office

2. Is there a Watershed Analysis Riparian Prescription in effect as of 1/1/99? (ask your local DNR region office)
   - Yes: You do not qualify to use the 20-acre exempt rule. Instead, you must follow the prescription. Leave numbers 17 and 18 blank, and go to number 19.
   - No: Go to 3

3. Do you own less than 80 acres of forest land in the state?
   - Yes: Go to 4
   - No: You do not qualify to use the 20-acre exempt rule. Leave numbers 17 and 18 blank, and go to number 19.

4. Is this forest practice on tax parcels that are 20 contiguous acres or less?
   - Yes: Go to 5
   - No: You do not qualify to use the 20-acre exempt rule. Leave numbers 17 and 18 blank, and go to number 19.

5. You qualify to use the 20-acre exempt rule, but you could choose to leave the RMZ buffers described in numbers 19 and 20. There may be consequences to using the 20-acre exempt rule. Not every landowner who uses this rule will be authorized under DNR's Incidental Take Permits. Read the information below and answer the questions in number 16 before making your decision.

Background for the state’s Incidental Take Permits for certain endangered and threatened fish species:

- The U.S. Fish and Wildlife Service and the National Marine Fisheries Service have listed some fish species in Washington State as threatened or endangered under the Endangered Species Act (ESA).
- Cutting trees along streams can affect threatened or endangered fish and cause “incidental take”, as defined in the ESA.
- If you cause “incidental take” without authorization, you may be in violation of the ESA.
- The state received authorization (called Incidental Take Permits) for “incidental take” of listed fish.
- If you use RMZ buffers described in numbers 19 and 20, you are authorized under the state’s Incidental Take Permits.
- If you use the 20-acre exempt rule, you may not be authorized under the state’s Incidental Take Permits. Answer number 16 above to see if you and your property are authorized under the state’s Incidental Take Permits.
- Equipment crossings or fords on Type S and F Waters are not authorized activities under the state’s Incidental Take Permits.
- Site-specific mitigation for non-road-related FPHP hydraulic projects is not authorized under the state’s Incidental Take Permits.

For more information on Incidental Take permits, see the Forest Practices Habitat Conservation Plan (FPHCP) section of the Forest Practices Division website at [http://www.dnr.wa.gov/BusinessPermits/Topics/Pages/Home.aspx](http://www.dnr.wa.gov/BusinessPermits/Topics/Pages/Home.aspx). Included on this site is a complete list of species covered by the FPHCP: see table 1.3, pages 25-28.

17. If harvesting within the Maximum RMZ widths of a Type S or F water on a 20-acre exempt parcel, complete the table below. Show RMZs, along with their associated stream segment identifiers, on your Activity Map. (Include stream shade assessment methodology, if you are harvesting within 75 feet or the maximum RMZ, whichever is LESS. If using Board Manual Section 1 to evaluate shade, you may use the “Stream Shade Assessment Worksheet”).

<table>
<thead>
<tr>
<th>Stream Segment Identifier (Letter)</th>
<th>Water Type (S, F)</th>
<th>Segment Length (feet)</th>
<th>Bankfull Width (feet)</th>
<th>Maximum RMZ Width (feet)</th>
<th>Are you harvesting within the maximum RMZ? (Y/N)</th>
</tr>
</thead>
<tbody>
<tr>

<td>S</td>
<td>200</td>
<td>80</td>
<td>115</td>
<td>Y</td>
</tr>
</tbody>
</table>

Stream Segment Identifier: Enter a different stream identifier (letter) for each stream segment. Show the identifiers on the activity map.

Water Type: Enter the water Type S or F. See Water Typing Requirements on page 38 for more information.

Segment Length: Enter the length of the segment in feet. This includes stream lengths or any portion of the perimeter of a lake or pond to which you are applying an RMZ.
Bankfull Width: Enter the width in feet measured at bankfull width. See Board Manual Section 2.

Maximum RMZ Width: Enter the "RMZ Maximum Width" per the table in WAC 222-30-023(1)

Are you harvesting within the maximum RMZ? Enter yes or no. You may harvest within the maximum RMZ if:

- Include stream shade analysis calculations when you are harvesting trees within the maximum RMZ or 75 feet, whichever is less. See Forest Practices Board Manual Section 1 for shade analysis calculation methods.
  
  - Example 1: If the maximum RMZ is 58 feet and you plan on harvesting any trees within 58 feet of a type S or F water, you need to evaluate the available shade from trees within 58 feet of the water.
  
  - Example 2: If the maximum RMZ is 86 feet and you plan on harvesting any trees within 86 feet of a type S or F water, you need to evaluate the available shade from trees within only 75 feet of the water.
  
  - EXCEPTION: WAC 222-30-040(5) allows the harvest of shade trees for constructing and maintaining road crossings and for yarding corridors.

- You leave the required wildlife trees (5 per acre)
- You leave the required riparian area leave trees (see the table in WAC 222-30-023(1))

You must show the following on your activity map:

- Stream segment identifiers
- Riparian management zones

References: WAC 222-30-023, WAC 222-30-040, WAC 222-30-060, Forest Practices Board Manual Section 1

18. Are you harvesting within 29 feet of a Type Np Water on a 20 acre exempt parcel?

No: Skip to number 21.

Yes: You will need to describe your leave tree strategy in number 23, Additional Information. Then skip to number 21.

Your leave tree strategy must be arranged to accommodate the following on EACH side of the Np Water:

- Leave at least 29 conifer or deciduous trees every 1000 lineal feet
- Leave trees are within 29 feet of bankfull width
- Leave trees need to be 6 inches in diameter or larger

You must show the following on your activity map:

- Stream segment identifiers
- Riparian management zones

19. If harvesting within 200 feet of any of Type S or F waters, complete the table below. Include DFC for all inner zone harvest, unless you have an HCP prescription. Show RMZs and CMZs, along with their associated stream segment identifiers, on your Activity Map.

<table>
<thead>
<tr>
<th>Stream Segment, Lake, or Pond Identifier (Letter)</th>
<th>Water Type (S, F)</th>
<th>Site Class (I, II, III, IV, or V)</th>
<th>Bankfull Width (feet)</th>

</tr>
<tr>
<td>B</td>
<td>F</td>
<td>II</td>
<td>12</td>
<td>D, L</td>
<td>126</td>
<td>170</td>
</tr>
</tbody>
</table>

This section should correspond to number 5 of Step 1 as validated by the DNR.

Stream Segment, Lake or Pond Identifier: These should correspond to the ones entered in number 5 of Step 1. If segment lengths and associated identifiers have changed, add the new identifiers to this table. Use numbers or letters other than “S”, “F”, or “N.” Identify the features on the Activity Map by using the identifiers that you entered on this form.

Water Type: Enter the stream type (S or F) for each stream segment identifier. If the landowner is substituting prescriptions from an approved HCP, write “HCP” in the space and follow the instructions for number 6.

Site Class: Enter only one site class for each identifier. Exception: You may enter multiple site classes if you are submitting an Alternate Plan (harvest code A). Site class maps are at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx) or at DNR Region Offices.

Bankfull Width: Enter the bankfull width in feet. See Forest Practices Board Manual Section 2.

Is there a CMZ? Enter “Yes” or “No.” If there is a CMZ, include written details of the physical and historical evidence used to delineate the CMZ on the ground. See Forest Practices Board Manual Section 2.
RMZ Harvest Code:

- RMZs are required on both sides of a stream.
- Treat each side of a stream as a separate RMZ segment.
- Measure RMZs for Type S or F waters horizontally from the outer edge of the BFW or CMZ, whichever is greater. Include stream shade analysis calculations when you are harvesting trees within 75 feet.
- Shade Requirements for S and F Waters: Leave all appropriate shade if you are harvesting within 75 feet of the bankfull width or Channel Migration Zone, whichever is greater. See the Forest Practices Board Manual Section 1 for guidance. EXCEPTION: WAC 222-30-040(5) allows the harvest of shade trees in connection with the construction and maintenance of road crossings or the creation and use of yarding corridors. See WAC 222-30-060 for yarding corridor restrictions.

Enter the code(s) from the list below

### RMZ HARVEST CODES

<table>
<thead>

</tbody>
</table>

**Inner and Outer Zones RMZ Harvest Codes**

**A - Alternate Plan** You must include a copy of the Alternate Plan.

**Inner Zone RMZ Harvest Codes** - Choose all that apply  NOTE: Desired Future Condition (DFC) web program is available at the Forest Practices website [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx). This software allows you print DFC calculations as required for harvest codes C-J.

**B - No Inner Zone Harvest**

**C - Hardwood Conversion** This is a converting a hardwood-dominated stand within the inner zone to a conifer-dominated stand. The requirements are in WAC 222-30-021(1).

You must include the following:

- A DFC printout that shows the conversion unit does not meet stand requirements.
- Evidence the conversion unit can be converted to a conifer stand. Evidence includes conifer stumps, historical photos, soil information, or the presence of a conifer under-story.
- Where, when, and how the landowner has successfully completed a hardwood conversion.
- Evidence of adequate shade (see Forest Practices Board Manual Section 1)
- A map with the following:
  - Ownership 500 feet upstream and downstream of the conversion unit
  - Boundaries of conversion units and no-harvest units
- The percent harvest proposed within the conversion units.

**D - Thinning from below** (Option 1). You must include DFC printouts for each stream segment where standing or down wood will be removed.

Reference: Chart in WAC 222-30-021(1) (b)

**E - Leaving trees closest to water** (Option 2) You must include DFC printouts for each stream segment where standing or down wood will be removed.
NOTE: You cannot use Option 2 for site class III on streams greater than 10 feet, because of the minimum floor (100 ft) constraint.

Reference: Chart in WAC 222-30-021(1) (b)

F - Salvage in the Inner Zone. You must include DFC printout
You may salvage standing snags and stumps if stand requirements are met.
You may salvage down wood if stand requirements are met and you leave at least 194 down wood pieces per acre.
References: WAC 222-30-045(3)

G - Stream-adjacent parallel road. If stand requirements cannot be met because of a stream-adjacent parallel road, use this code.
You must include
- Basal area calculations for the road area within the core and inner zones.
- If you are leaving trees to make up for a basal area deficiency, include a tree count.

References: WAC 222-30-021(1) (b) (iii).

H - Constructing a new stream crossing. If the crossing is not adjacent to a harvest unit, use only the trees within the right-of-way limits for basal area calculations.
You may remove right-of-way trees in the core zone if:
- They are not part of large woody debris (LWD) placement strategy
- Stand requirements are met
You may take the right-of-way trees in the inner zone if
- Stand requirements are met
You must include DFC printout.

References: WAC 222-30-021(1).

I - Road construction or day-lighting. You must include DFC printout.

References: WAC 222-30-021(1).

J - Yarding Corridors. If wood will be removed from the inner zone, include a copy of the DFC printout. Wood can be cut, but not removed from the core zone.

References: WAC 222-30-021(1).

Outer Zone RMZ Harvest Codes - Choose all that apply

K - No Outer Zone Harvest.
Outer zone harvest: choose only one of the codes L, M, N, O, or P for each segment identifier to indicate your leave tree strategy. If a sensitive feature is present in the outer zone, you must choose M, clumping. You may also choose M if sensitive features are not present in the outer zone. Sensitive features are listed in WAC 222-30-021(1)(c)(ii).

L - Dispersal. Leaving 20 trees per acre evenly dispersed.

M - Clumping. Leaving 20 trees per acre clumped on sensitive features; or if sensitive feature is not present, leaving well dispersed clumps throughout the outer zone.

N - Large woody debris in-channel placement strategy. You must include with the FPA/N:
- A copy of the LWD placement plan; and
- A copy of the approved HPA.

O - Outer zone leave trees exchanged for CMZ basal area. You must include:
- The CMZ basal area calculations; and
- The number of leave trees that will remain in the outer zone.

P - Outer zone leave trees exchanged for excess inner zone basal area in conjunction with an Option 2 inner zone harvest. You must include the number of leave trees that will remain after harvest.

Q - Salvage. You may salvage standing snags or stumps or down wood in the outer zone if:
- Leave tree requirements are met: 20 trees per acre (unless using placement strategies or offsets allowed in WAC 222-30-021(1)(c) (iv))
- Down wood requirements are met (2 or more down logs per acre harvested) WAC 222-30-020 (1)

DFC Run Number. Enter the Desired Future Condition (DFC) Run Number shown on the top of your DFC worksheet.

Total width of RMZ. RMZ widths for Type S or F waters are dependent on stream width and site class.
1) Look up the site class on the maps at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx)
2) Measure the bankfull width - see the Forest Practices Board Manual Section 2
3) Look up the RMZ width - they are the same for no inner zone harvest, Option 1, or Option 2.

You must show the following on your activity map:

- Stream segment identifiers (don’t use the letters S, F, or N - use numbers or other letters)
- Channel Migration Zone (CMZ)
- New road crossings (Harvest Code H)
- Road construction or day-lighting (Harvest Code I)
- Yarding corridors where trees will be removed from the Inner Zone (Harvest Code J)
- Location of a trees that are left to make up basal area deficiency due to the presence of a stream adjacent parallel road (Harvest Code G)

References: WAC 222-30-060, WAC 222-30-021(1).

20. If harvesting within 50 feet of Type Np water, complete the table below. Show RMZs, along with their associated stream segment identifiers, on your Activity Map.

Example:

<table>
<thead>
<tr>
<th>Stream Segment Identifier (Letter)</th>
<th>Total Stream Length in Harvest Unit (feet)</th>
<th>Length of No-Harvest Buffers in Harvest Unit (feet)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>100'</td>
<td>100'</td>
</tr>
<tr>
<td>B</td>
<td>75'</td>
<td>75'</td>
</tr>
<tr>
<td>C</td>
<td>250'</td>
<td>200'</td>
</tr>
</tbody>
</table>

RMZ buffers are required for Type Np waters and for sensitive sites.

To determine total length of required buffers, you may use the Western Washington Type Np Water Worksheet on page 48. Don’t include the worksheet with your Long-term FPA. Mark the boundaries on the ground of all riparian buffers affected by your proposal.

You must show the following on your activity map:

- Stream Segment Identifiers
- Streams that are on the ground, but not on the DNR Activity Map
- Boundaries of all RMZs
- Boundaries of all sensitive sites
- 50 foot no cut buffer segments (end points)
  - Or you may describe the extent of the 50 foot no cut buffers in number 20, additional information.

References: WAC 222-30-021(2) (b), WAC 222-16-010, WAC 222-16-031

21. How are the following marked on the ground? (Flagging, paint, road, fence, etc) You may only need to do a sample boundary marking. See instructions for which boundaries you are required to mark.

Harvest Boundaries: ________________________________

Clumped Wildlife Reserve Trees/Green Recruitment Trees: ________________________________

Right-of-way limits/road centerlines: ________________________________

Riparian Management Zone Boundaries and Leave/Take Trees: ________________________________

Extents of unstable feature(s): ________________________________

Channel Migration Zone: ________________________________

Wetland Management Zone Boundaries and Leave/Take Trees: ________________________________

(For use with WW LTA forms dated 5/9/2014)
22. Have you reviewed the proposed activity area to determine if it may involve historic sites and/or Native American cultural resources? Read the instructions carefully before answering this question.

[ ] No [ ] Yes

Mark Yes if you have checked the area where you plan to conduct your forest practices activities for the presence of cultural resources. See information below.

Forest Practices rule WAC 222-16-010 defines cultural resources as:

- "archaeological and historic sites and artifacts, and traditional religious, ceremonial, and social uses and activities of affected Indian tribes".

Areas most likely to contain cultural resources may include the following:

- Along defined ridge lines and at saddles
- Areas near natural water including shorelines and terraces
- Around rock outcrops and talus (rock rubble) slopes
- In cedar tree stands and aspen stands containing older, scarred trees
- Near springs and old wells
- Around extractable mineral sources
- Areas in proximity to known cultural sites

Examples of potentially important cultural resources:

- Native American graves and cairns (stacked rocks); historic graves and cemeteries (Protected by RCW 27.44.040 and chapter 68.60 RCW)
- Glyptic records (designs, names, dates carved or painted on rock) (Protected by RCW 27.44.040 and RCW 27.53.060)
- Native American old camp and village sites; old cabins, barns, sheds, logging/mining/railroad camps, mills, mining operations, and their remnants
- Arrowheads, other stone tools, and the stone flakes from making them; old fire pits, fire hearths, wood stoves, cans, bottles, ceramics, bricks, metal, lumber
- Old trails, wagon roads, railroad grades, ditches, and utility lines
- Caves, rock overhangs, and rock shelters historically used by humans; old rock walls, and old pits in talus slopes
- Culturally modified trees (trees modified by humans) such as old stripped bark, trunk with old blaze, name, date, drawing

NOTE: Most Native American cultural resources are not recorded in any state or local database. Before you submit your FPA/N, you are encouraged to contact the affected Indian Tribe(s). For Tribal contact information, go to DNR Forest Practices Activity Mapping Tool or contact your DNR Region office.

Your FPA/N will be screened to determine whether it may involve cultural resources.

- If your FPA/N involves cultural resources, WAC 222-20-120 includes options for meeting with the affected Indian Tribe(s) with the objective of agreeing on a protection plan. Your DNR Region office will tell you which Tribe(s) you need to contact and how to document your communication with the Tribe(s).
- If the cultural resource is an archaeological site, contact the Department of Archaeology and Historic Preservation at www.dahp.wa.gov to see if you need their Archaeological Excavation and Removal permit. See chapter 25-48 WAC.
- Note: If you, DAHP, and the affected Tribe(s) have already agreed upon a protection plan for the cultural resources in your activity area, please note this in the Additional Comments section of the FPA/N form.

23. Additional Information (attach additional pages if necessary): You may include additional information in the space provided or on a separate page. Include the number that each comment refers to. You may also include multiple maps to help explain your proposal.

For hydraulic projects in Type S, F and more complex Type N Waters, provide detailed information on the proposal including equipment, description of the project, plan design and profiles, fish protection measures, re-vegetation of site (if applicable), dewatering plan (if applicable), etc. Refer closely to Board Manual Section 5, which contains best management practices for specific types of hydraulic projects. The following figures illustrate examples of complete plan information including a plain view, culvert cross section and channel profile.
Elements of a Plan View

1. Required: show road and stream on plan view, indicating changes in alignment, benchmarks and/or reference points and special features that affect the design.
2. Required: show road drainage plan, including cross culverts, ditch lining, sediment ponds, etc.
3. Optional: add details concerning stream channel characteristics, for example pool-riffle geometry, size, and placement of large wood.
4. Optional: a site map with contours and stream layout details.

Survey u/s profile approx. 20 CBW (min. 150 ft.)
Survey d/s profile approx. 20 CBW (min. 150 ft.)

w/s = upstream
d/s = downstream
CBW = channel bed widths
Elements of a Cross Section View

1. Show culvert cross section (size or configuration) with streambed shape and Channel Bed Width (CBW). Specify culvert bed materials.
2. Show 100-year flood level water surface and top of bank on profile.
3. Show the location and elevation of existing culvert at outlet, if a replacement project.
Elements of a Channel Profile View

1. From channel survey establish long profile line with minimum 40 times Bankfull width plus the length of the new culvert.
2. Show the longitudinal profile, current water surface elevation, culvert inverts, bed elevations, regrade line expected.
3. Reference design elevations to benchmarks in order to locate critical design elements such as proposed culvert inverts and/or channel regrade.
Required elements of a Cross Section View
1. Show the flow at the 100-year flood level ($Q_{100}$).
2. Show flow at channel bed width ($Q_{CBW}$).
3. Show clearance between the $Q_{100}$ and bottom of the superstructure.
4. Show the existing structure, if project is a replacement.
5. Optional: Show Factor of Safety (FS).
24. **Signature Block**: The Landowner must legibly print and sign their name and record the date of signature before this Long-term FPA can be accepted. Stamped signatures and/or electronic signatures are not acceptable.
How do I fill out the 5 Day Notice of Operation for the Long-term FPA?

Your 5 Day Notice of Operation (Notice) must be legible for electronic scanning. Please:

- Type or use ink
- Do not use whiteout. If you make mistakes, cross them out and initial your changes.
- Do not write in the margins
- There is room for descriptions and comments in number 4 of the form. You may add pages if you need more writing space. Include the number to which each comment refers.
- If you need assistance, see page 3 for information.

NOTE: Although this Notice isn’t subject to an approval or disapproval, it must be complete to be accepted and recorded as “received” by the DNR. You are authorized to start operations 5 days after the DNR region office receives your Notice.

1. Landowner, Timber Owner, and Operator
Print the name, address, and phone number of the Landowner, Timber Owner, and Operator.
If all three are the same, write “Same as Landowner” in the TIMBER OWNER and OPERATOR boxes. Email addresses are optional.
This form identifies the timber owner and operator for the activities subject to this Notice.
If any of the landowner, timber owner, or operator change during operation under this Notice, you must submit a Notice of Transfer form. See pages 1 or 52 for forms information.

2. Long-term Forest Practices Application (FPA) number: ____________________
Enter the FPA number printed on the Decision Page DNR sent you to approve your Long-term FPA (Step 2). If you didn’t get a Decision Page, call the region office to check the status of your Long-term FPA. You can’t operate without an approved FPA. Reference: WAC 222-20-016(2)(b)

3. What is the Forest Tax Registration Account Number? ____________________
Contact the Washington State Department of Revenue’s Forest Tax Program to look up an existing Forest (timber) tax number or to apply for a new one. Their phone number is 1-800-548-8829. You can get tax forms and information from their website at: http://www.dor.wa.gov.

4. Expected start and end dates of operation (month/year to month/year): _____ / ________ to _____ / ________
Enter the months and years that you expect to start and end your operations.

5. Describe the forest practices activities that you will be starting. You may attach additional paper. Include any harvest unit number(s) and/or identifiers for road(s), spoil area(s), wetland(s), and/or stream segment(s) that you plan on operating on or around as approved or approved with conditions in Step 2 of your Long-term FPA. Indicate the type(s) of harvest that will be taking place for each unit under this Notice. Show these activities on an Activity Map, including green up information for even-aged harvests.
You choose the format to describe the activities that you will be starting.
The operations that you will be starting with this Notice must be relevant to Step 2 of your Long-term FPA.
You must show the following on your activity map:
- Activity Map information and requirements for this Notice are on pages 34-37.
- Harvest unit boundaries
- Riparian management zones for each management prescription being applied
- Wetland management zones
- Even-aged harvest must show adjacent land information on the Activity Map (“green-up”)
6. **Reforestation. Check all that apply. If you aren’t harvesting or salvaging timber, skip to number 7.**

[ ] Planting. Tree Species: ________________________________
[ ] Natural. **Include a Natural Regeneration Plan**
[ ] Not required because of the following:
  [ ] Only individual dead, dying, down, or windthrown trees will be salvaged
  [ ] Trees are removed under a thinning program reasonably expected to maximize the long-term productivity of commercial timber
  [ ] I am leaving at least 100 vigorous, undamaged, and well-distributed saplings or merchantable trees per acre
  [ ] There is an established plantation and my harvest will not damage it
    o Western Washington: an established plantation is an average of 190 seedlings per acre
    o Eastern Washington: an established plantation is an average of 150 seedlings per acre
  [ ] Road right-of-way harvest, only

Reforestation can be artificial (planting tree seedlings) or natural (relying on leave trees to re-seed).

An established plantation is an average of 190 seedlings per acre in Western Washington or 150 seedlings per acre in Eastern Washington.

References: WAC 222-34-010

7. **How are the following marked on the ground? (Flagging, paint, road, fence, etc)**

   **Harvest Boundaries:** __________________________________________
   **Clumped Wildlife Reserve Trees/Green Recruitment Trees:** __________________________
   **Right-of-way limits/road centerlines:** __________________________________________
   **Riparian Management Zone Boundaries and Leave/Take Trees:** __________________________
   **Extents of unstable feature(s):** __________________________________________
   **Channel Migration Zone(s):** __________________________________________
   **Wetland Management Zone Boundaries and Leave/Take Trees:** __________________________

8. **Signature Blocks:** The Landowner, Timber Owner, and Operator (as shown in number 1) must EACH legibly print and sign their names and record the date of signature before this Notice can be accepted. If all three are the same, only the LANDOWNER box needs to be signed and dated. Stamped signatures and/or electronic signatures are not acceptable.

   **NOTE: If you are a “Perpetual Timber Rights Owner,” and are submitting this without the Landowner’s Signature, provide written evidence the landowner has been notified.**

   **Note:** A perpetual timber rights owner may sign as the Landowner. A perpetual timber rights owner does not own the land, but has permanent rights to all the timber on the land. They may submit a FPA without the forest landowner’s signature if:
   - The forest practice is not a conversion;
   - The perpetual timber owner’s name is in the timber owner block in number 1;
   - The perpetual timber owner signs the Long-term FPA as the timber owner;
   - The perpetual timber owner gives DNR proof that the forest landowner has a copy of the Long-term FPA.

Activity Map Information and Requirements
Which map type do I submit with my Long-term FPA?

Use the Activity Map for Step 1, Step 2, and the 5 Day Notice of Operation. You can download Activity Maps from DNR's mapping web site. The web site also offers Base, Resource, and Site Class Maps. These are for reference and use as work maps. These maps also allow users to turn GIS layers on and off for customized maps.

What are the Map Standards?

- Use 1":1000’ DNR Activity map – this can be found at [http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx](http://www.dnr.wa.gov/BusinessPermits/forestPractices/Pages/home.aspx)
- You may use larger scale maps or company GIS maps to show details of harvest and road activities; you still must submit a 1":1000’ scale Activity Map showing harvest boundaries and road locations
- Use black ink
- Do not use whiteout
- Do not use color pencils or highlighters - do not use yellow or red shading
- Include a legend
- Do not write in the margins
- Use more than one map if you need to
- Don’t fax these maps to DNR

What Additional Items Must Company GIS Maps Show?

- Current DNR water and wetland layers
- DNR Geographic registration TIC marks using NAD83
- Contour lines with elevations (maximum 40’ interval)
- Section, township and range lines and numbers & corners
- Scale bar - scale within the range of 1” = 200’ to 1” = 1,000’
- North arrow
- ¼” margin on all sides
- Sizes: Letter, Legal, or Tabloid
What Must Be Shown on the Activity Map?

**Step 1:** Refer to the Long-term FPA and instructions for further clarification. 
NOTE: Make copies of your final Step 1 Activity Maps so you can add to them as your Step 2 Activity Maps.

**Water:**
- All streams, lakes or ponds and their associated identifiers (number 7)
- All wetlands and their associated identifiers (number 8)
- All sensitive sites and their associated identifiers (number 9)
- Cross out streams, lakes, or wetlands that don’t exist on the ground but are shown on the Activity Map

**Landscape features:**
- Unstable slope features (number 4 and 5)
- Extents of channel migration zones (number 6e)

**Roads:**
- All existing roads and their associated identifiers (number 10)

**Sensitive information:** This must be on a separate map from the information listed above.
- Areas of critical wildlife habitat (number 6d)
- Archaeological sites (number 12)
- Historic sites (number 12)
- If you answer ‘No’ to Step 1 number 2b are required to submit a map identifying property owned when their harvest units do not touch. See sample below.

---

**Step 2:** Add the following to the information shown on your Step 1 Activity Map(s).

**Proposed Road Activities:** numbers 12 and 13
- New roads
- Abandonment roads
- Temporary roads
- New or replaced water crossings
- End haul and/or overhaul
- New or expanded rock pits
- Spoil areas

**Harvest boundaries:**
- Wetland Management Zones (number 14)
- Unit numbers and their boundaries (number 15)

**Harvest boundaries (continued):**
- Landings on cable units
- Riparian Management Zones (numbers 17-19)
- Yarding corridors through Type S and F Water RMZs (number 11)
- Clumped WRTs and GRTs
- Overhead utility lines
- Location of trees left for basal area deficiency due to stream adjacent parallel road
- Other boundaries that may exclude unstable slope features, buffers for critical wildlife habitat, or archaeological or historic sites
**5 Day Notice of Operation:** Only include maps that your 5 day notice of operation is intended for.

**Information on your Steps 1 and 2 Activity Maps:**
- Include all the information from Steps 1 and 2 that apply to your 5 Day Notice(s) of Operation.

**“Green up” information:**
- Even-aged harvest must show adjacent land information.
  - If not forest land, label it “Not Forest Land.”
  - If you do not own the adjacent land, write “Not Owned.”
  - Estimated average forest age class;
  - Estimated total acres of contiguous stands that are less than 4 feet tall or 5 years old or less, on land that you own.
- Estimated linear feet of the perimeter (total distance around) each harvest unit by age-class.

**Harvest activities:**
- Harvest boundaries that apply to this 5 day notice of operation
- Landing locations, other than cable landings, not shown in Step 2

**NOTE:** This is not an amendment. If you want to propose something different than what was approved and conditioned by Step 2 of your Long-term FPA, you must submit an amendment request.
Water Typing Requirements

You are required to verify and identify water types and wetlands within 200 feet of your proposed forest practices activities prior to turning in a Forest Practices Application/Notification (FPA/N). Call the DNR region office if you need help classifying water types or wetlands. Notes: Type S (shorelines) waters don’t need to be verified and can’t be changed as these are determined by the Washington State Department of Ecology. Type F waters get the highest protection; you are not required to verify Type F waters but they must be designated on the map. Bankfull width includes wetland areas inundated with water during normal high flow. See the Forest Practices Board Manual Section 2.

How water types affect your FPA/N: specific water types have specific buffer requirements.

- If you thought the stream was a Type Np and left a Type Np buffer, and DNR determines it to be a Type F, your FPA will be disapproved.
- If you thought the stream was a Type Np, but left a Type F RMZ, and DNR determines it to be a Type F, your FPA will not be disapproved for this reason.

Step 1: Get a DNR Activity Map from Forest Practices website listed on page 45 of these instructions. They are also available at DNR region offices.

Step 2: Check the locations and types of all streams, ponds, lakes, and wetlands that are on the ground
- Within the boundaries of your forest practice and
- Within 200 feet on all sides of the outer boundaries of your forest practice.
  - See WAC 222-16-031 and Forest Practices Board Manual Section 13 for water typing information
  - See the Water Type Classification Worksheet in these instructions for help.
  - See WAC 222-16-035 for wetland typing information.

Step 3: Update the DNR Activity Map so that it accurately shows the correct water and wetland types and their locations as they exist on the ground. These include Type F, Np, and Ns waters, F/N type breaks, Np/Ns type breaks, and type A, B, and forested wetlands greater than three acres in size.
- For water bodies not shown on the Activity Map:
  - Draw the stream, lake, pond, or wetland on the map.
  - Write on the map the correct water type or an identifier that will match it to your FPA/N.
- For water bodies that are labeled with an incorrect water type or no water type, write on the map the correct water type or give it an identifier that will match it to your Forest Practices Application/Notification (FPA/N).
- For water bodies that don’t exist, cross them off the Activity Map (use a series of x’s or hatches). This includes streams labeled as “U” for “unidentified.” Explain in the Additional Information section of your FPA/N how you decided that the water bodies do not exist (i.e. you walked the area and didn’t find any water or defined channels).
  - Note: The updated map that you create is only for your FPA/N and doesn’t result in an update to DNR’s maps.

Step 4: Explain in your FPA/N how you verified the Type Np and Ns water types, including how you determined that a water type shown on the map doesn’t exist on the ground.
  Include one or more of the following with your FPA/N:
  - Explain in the Additional Information section of your FPA/N or on additional pages how you determined each water type. Include:
    - Site visit date(s).
    - The area visited (the area covered by your property, length of stream observed, etc.).
    - Observations (stream width, stream gradient, no water, no channel, etc.).
    - For Type Np water describe how you found the uppermost point of perennial flow.
  - Water Type Classification Worksheet(s) that is included in these instructions.
  - Water Type Modification Forms:
    - These aren’t required with your FPA/N.
    - Use these when you want to change the water type map in DNR’s system.
    - See the Water Type Modification form and instructions for more information.
    - These can be downloaded from the Forest Practices website listed on page 45 of these instructions. They are also available at DNR Region Offices.
    - Note: If you base your riparian management zones on a proposed water type change, and DNR cannot process this change before the Decision Date, DNR may disapprove your FPA/N.

(For use with WW LTA forms dated 5/9/2014)
Western Washington Water Type Classification Worksheet

**Stream/Segment ID:** _____  **Stream/Segment ID:** _____  **Stream/Segment ID:** _____

**Date Observed:** _____  **Date Observed:** _____  **Date Observed:** _____

1. **Do you have a protocol survey?** (See the Board Manual Section 13) Or, does the stream have waiver characteristics? (See WAC 222-16-031(3) (b) (ii))
   - No. Continue.
   - Yes. Attach documentation or approved WTMF number:
     - Fish found. Stop.
     - No fish found. Go to 6.

2. **Were fish observed or are fish known to use the stream any time of the year?**
   - Yes. Type F water. Stop.
   - No. Continue.

3. **Is there an impoundment (ponded water) upstream of the assessed segment, that is greater than .5 acres?**
   - Yes. Type F water. Stop.
   - No. Continue.

4. **Are there segments within or above the assessed portion of the stream where the average BFW is two feet or greater? AND the average stream gradient is less than or equal to 16%?**
   - Yes. Type F water. Stop.
   - No. Continue.

5. **Are there segments within or above the assessed portion of the stream where the average BFW is two feet or greater? AND the average stream gradient is between 16% and 20%? AND, the contributing basin to the stream is greater than 50 acres?**
   - Yes. Type F water. Stop.
   - No. Continue.

6. **Does the stream segment contain water at all times during a normal rainfall year?**
   - Yes. Type Np water. Go to 9.
   - No. Continue.

7. **Is the stream segment downstream of a perennial source of water?**
   - Yes. Type Np water. Go to 9.
   - No. Continue.

8. **Is the stream physically connected by an above-ground channel to Type S, F, or Np water?**
   - Yes, Type Ns water. Stop.
   - No, non-typed water.

9. **Describe how you determined the uppermost point of perennial flow. Include a description of its location and show the point on a map (Use a separate piece of paper if necessary).**

   **Stream/Segment ID:** _____  **Description:** _____
Instructions for the Water Type Classification Worksheet

The Water Type Classification Worksheet (WTCW) is a tool to document water types based on field verification per WAC 222-16. The WTCW is not required. The purpose of the worksheet is to help you determine stream types and describe how streams were typed within and adjacent to the proposal area. All waters within 200 feet of the proposed forest practices activity must be typed. This worksheet will NOT change the water type maps. If you want to make permanent changes to the water type maps, please use the Water Type Modification Form.

NOTE: It is important to determine the uppermost point of perennial flow for type Np waters. It is strongly recommended that landowners locate this point during the driest period of the year (August-September).

Stream/Segment ID:
List an identifier for the stream segment (ex. Stream/Segment ID: a). If you have several stream segments of the same type, you can list more than one identifier in each column (ex. Stream/Segment ID: a, e, j). Please do NOT use F, N, S, U or X as identifiers. The identifiers should also be shown on the Forest Practices Activity Map.

Date Observed:
List the date the stream was verified in the field.

1. Do you have a protocol survey? (See the Board Manual Section 13) Or, does the stream have waiver characteristics? (See WAC 222-16-031(3)(b)(ii))
   [ ] No. Continue.
   • Check no if you do NOT have a protocol survey for the stream segment. Or, DNR has NOT waived or modified physical characteristics (see WAC 222-16 for definitions of waiver characteristics). Continue to 2.
   [ ] Yes. Attach documentation or list approved WTMF# 
   • Check yes if a protocol survey was completed and attach survey documentation.
   • Check yes if the stream/segment was previously surveyed and documented with a WTMF. List the WTMF#. Continue.
   [ ] Fish found. Stop.
      • If fish were found do NOT continue the worksheet. The stream/segment must be afforded protection for Type F water.
   [ ] No fish found. Continue to 6.
      • If fish were NOT found continue to 6 to determine/describe whether the stream/segment is an Np or Ns.

2. Were fish observed or are fish known to use the stream any time of the year?
   • Check yes if fish were observed or are known to use the stream. Do not continue worksheet. The stream/segment must be afforded protection for Type F waters.
   • Check no if fish were not observed and are not known to use the stream. Continue to 3.

3. Is there an impoundment (ponded water) upstream of the assessed segment, that is greater than .5 acres?
   • Check yes if there is an impoundment at seasonal low water. Do not continue the worksheet. The stream/segment must be afforded protection for Type F waters.
   • Check no if there is not an impoundment and continue to 4.

4. Are there segments within or above the assessed portion of the stream where the average BFW is two feet or greater (Western Washington) or three feet or greater (Eastern Washington)? AND the average stream gradient is less than or equal to 16%?
   • Note: This question defers to physical characteristics in the absence of a fish presence survey per Board Manual Section 13 (where field surveys for determining fish use have not been done, water type is determined by applying the physical characteristics contained in WAC 222-16-031(3)).
   • Note: Recording and providing observations, notes and possibly photos of this situation can help document decisions with regard to these segments of streams. See Figure 1.
Check yes if the stream/segment meets the question’s description. Do not continue the worksheet. The stream/segment must be afforded protection for F waters.

Check no if the stream/segment does not meet the question’s description and continue to 5.

5. Are there segments within or above the assessed portion of the stream where the average BFW is two feet or greater (Western Washington) or three feet or greater (Eastern Washington)? And the average stream gradient is between 16% and 20%? AND, the contributing basin to the stream is greater than 50 acres (Western Washington) or 175 acres (Eastern Washington)?

- **Note:** See question 4 note. If the contributing basin size is greater than 50 acres in western Washington or 175 acres in eastern Washington the stream/segment gradient can be up to 20% and still meet type F water characteristics.

- **Note:** Recording and providing observations, notes and possibly photos of this situation can help document decisions with regard to these segments of streams. See Figure 1.

- Check yes if the stream/segment meets the question’s description. Do not continue the worksheet. The stream/segment must be afforded protection for F waters.

- Check no if the stream/segment does not meet the question’s description and continue to 6.

6. Does the stream segment contain water at all times during a normal rainfall year?

- Check yes if the stream/segment contains water year-round. Go to 9 to describe how the uppermost point of perennial (year-round) flow was determined.

- Check no if the stream/segment is dry at some point during the year. Continue to 7.

7. Is the stream segment downstream of a perennial source of water?

- Check yes if there is a perennial water source upstream of the stream/segment. Go to 9 to describe how the uppermost point of perennial flow was determined.

- Check no if there is NOT a perennial water source upstream of the stream/segment. Continue to 8.

8. Is the stream physically connected by an above-ground channel to a Type S, F, or Np water?

- Check yes if the stream is connected. Do not continue the worksheet. The stream/segment is a type Ns water.

- Check no if the stream is not connected. Do not continue the worksheet. The stream/segment is a non-typed water.

9. Describe how you determined the uppermost point of perennial flow. Include a description of its location and show the point on a map (Use a separate piece of paper if necessary).

   **Stream/Segment ID:**_______  **Description:**

   - List the stream/segment identifier you wish to describe. Use the Description box to describe how you determined the uppermost point of perennial flow. For example, “uppermost point of perennial flow was identified in August and a pink flag was used to mark the spot.” You may also add any other pertinent information. If you have several Np waters, you may need to use a separate piece of paper to provide adequate descriptions.
**Type S and F Riparian Management Zone Cross-Section**

**Bankfull Width (BFW)** means:

(e) For streams - the measurement of the lateral extent of the water surface elevation perpendicular to the channel at bankfull depth. In cases where multiple channels exist, bankfull width is the sum of the individual channel widths along the cross-section. See the Board Manual Section 2.

(f) For lakes, ponds, and impoundments - line of mean high water.

(g) For tidal water - line of mean high tide.

(h) For periodically inundated areas of associated wetlands - line of periodic inundation, which will be found by examining the edge of inundation to ascertain where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland.

**Channel Migration Zone (CMZ)** means the area where the active channel of a stream is prone to move and this results in a potential near-term loss of riparian function and associated habitat adjacent to the stream (See Board Manual Section 2 for descriptions and illustrations of CMZs, delineation guidelines), except as modified by a permanent levee or dike. For this purpose, near-term means the time scale required to grow a mature forest.

**Core Zone** means the 50 foot buffer of a Type S or Type F water, measured horizontally from the outer edge of the bankfull width or the outer edge of the channel migration zone, whichever is greater.

**Inner Zone** means the area measured horizontally from the outer boundary of the core zone of a Type S or F water to the outer limit of the inner zone. The outer limit of the inner zone is determined based on the width of the affected water, site class, and the management option chosen for timber harvest within the inner zone.

**Outer Zone** means the area measured horizontally between the outer boundary of the inner zone and the RMZ width as specified in the Western Washington RMZ tables in WAC 222-30-021. RMZ width is measured from the outer edge of the bankfull width or the outer edges of the channel migration zone whichever is greater.

**References:**

- See Board Manual Section 2 for information about bankfull width and channel migration zones.
- See WAC 222-30-021 for information about Western Washington core, inner, and outer zones.
Inner Zone Hardwood Conversion Worksheet

1. Do you own 500 feet upstream and 500 feet downstream of the conversion unit?
   - [ ] Yes. Go to question 2.
   - [ ] No. Stop, does not qualify

2. Do the riparian areas next to the conversion unit have the required shade described in WAC 222-30-040 or have a 75-foot buffer with trees 40 feet tall on both sides of the stream 500 feet above and below the harvest unit?
   - [ ] Yes. Go to question 3.
   - [ ] No. Stop, does not qualify.

3. Is there evidence that the conversion unit area can be successfully reforested with conifer and support development of a conifer stand?
   - [ ] Yes. Go to question 4.
   - [ ] No. Stop, does not qualify.

4. Does the RMZ core or inner zone within the conversion unit contain a stream adjacent parallel road?
   - [ ] Yes. Stop, does not qualify.
   - [ ] No. Go to question 5.

5. Has the landowner successfully performed post-harvest treatment to convert a hardwood dominated stand to a conifer stand?
   - [ ] Yes. Go to question 6.
   - [ ] No. Go to question 6.

6. Are there fewer than 57 conifer trees per acre equal to or larger than 8 inches in diameter at breast height in the conversion unit area?
   - [ ] Yes. Go to question 7.
   - [ ] No. Stop, does not qualify.

7. Are there fewer than 100 conifer trees per acre larger than 4 inches in diameter at breast height in the conversion unit area?
   - [ ] Yes. Go to question 8.
   - [ ] No. Stop, does not qualify.

8. Does the stand meet desired future condition requirements (WAC 222-30-021(1) (b))?
   - [ ] Yes. Stop, stand does not qualify.
   - [ ] No. Provided you correctly answered all the above questions the proposed unit qualifies for hardwood conversion in the inner zone.
Slope Stability Informational Form
Forest Practices Application/Notification

Note: Complete and attach this form to your FPA if you answered “Yes” to FPA question 11 or 12. “Potentially unstable slopes or landforms” are defined in WAC 222-16-050(1)(d). See Board Manual Section 16 part 2.1 for descriptions of potentially unstable slopes.

1. What screening tools were used? ☐ GIS, ☐ Aerial Photo, ☐ LiDAR, ☐ Other (describe): ____________

2. What potentially unstable slopes were identified within the boundaries of your forest practices activity area? Check all that apply:
   - Inner Gorge
   - Groundwater recharge areas for glacial deep-seated landslides
   - Bedrock Hollow
   - Convergent Headwall
   - Toe of deep-seated landslide
   - Outer edges of meander bends
   - Other (describe): ____________

3. What potentially unstable slopes were identified adjacent to your forest practices activity area? Check all that apply:
   - Inner Gorge
   - Groundwater recharge areas for glacial deep-seated landslides
   - Bedrock Hollow
   - Convergent Headwall
   - Toe of deep-seated landslide
   - Outer edges of meander bends
   - Other (describe): ____________

4. Date of field review: ____________

5. Person(s) that conducted field review:
   - Name: ____________________  Title/position: ____________________
   - Name: ____________________  Title/position: ____________________

6. If any features identified in #2 and/or #3 were bounded out, describe the manner in which the boundary was determined:
   ____________________________________________________________________________________________
   ____________________________________________________________________________________________
   ____________________________________________________________________________________________
   ____________________________________________________________________________________________
   ____________________________________________________________________________________________
   ____________________________________________________________________________________________

7. Show all field reviewed areas for potentially unstable slopes or landforms on a map (may use a forest practices activity map, harvest map or GIS map – See map example on page 35). This map is intended to be developed by the field practitioner.
Proposed unit boundary
Area field reviewed
Area field verified potentially unstable

FOREST PRACTICE RESOURCE MAP

TOWNSHIP ______________, RANGE ______________, SECTION_____

Application #: _______________  Example

Slope Stability Assessment Form Map
CMZ Assessment Form
Forest Practices Application/Notification

Note: Complete and attach this informational form to your FPA if you answered “Yes” to FPA question 13 j. See Board Manual Section 2 (BM 2) for guidance on evaluating Channel Migration Zones (Forms within BM 2 are optional).

Applicant Office Review:
1. Screening tools used: [ ] GIS [ ] Aerial Photo Years: __________________________ [ ] LiDAR [ ] USGS Topographic Map
   [ ] Other (describe): ____________________________________________________________

2. Are you aware of channel movement or did you observe obvious channel movement between aerial photograph years?
   [ ] No, continue with to question 3
   [ ] Yes, skip to question 5

3. Evaluate valley confinement using USGS topographic map(s) or aerial photographs.
   [ ] Valley floor is significantly wider than the channel. Channel migration may be occurring.
   [ ] Valley floor is very narrow, obviously less than twice as wide as the channel. If you can clearly see this
     circumstance on the aerial photographs, it is unlikely that channel migration is occurring.

4. Did you observe any of the following on the aerial photographs?
   [ ] Side Channels
   [ ] Multiple Channels (Braiding)
   [ ] Large Gravel Bars
   [ ] Wood Jams
   [ ] Eroding Banks
   [ ] High Sinuosity or Sharp Channel Bends
   [ ] New Channels Occurring Between Photo Years (Avulsions)

Field Review:
5. Date of field review: __________________________

6. Person(s) that conducted field review:
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

   Name       Title/position

   Name       Title/position

7. If CMZ is present check the component(s) present in your CMZ delineation.
   [ ] Avulsion hazard area
   [ ] Erosion hazard area (attach erosion rate calculations)

8. What was the distance of channel walked? What was the length of CMZ boundary delineated?
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

9. Briefly describe how you determined a CMZ exists, how you delineated the outer edge of the CMZ, and how you marked
   the outer edge of the CMZ on the ground (flagging color, paint, etc.):
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

(For use with WW LTA forms dated 5/9/2014)
Stream Shade Assessment Worksheet

Refer to Board Manual Section 1 (BM1) to evaluate stream shade and complete this worksheet.

Stream Identifier:__________ Stream Type (S, F) :__________ Stream Width(ft.):__________ Stream Length (ft.):__________

Temperature Category: [ ] 16° [ ] 18° Elevation:__________ Canopy Cover Required per Nomograph (%):__________

<table>
<thead>
<tr>
<th>CANOPY CLOSURE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td>Plot #</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Pre-harvest Condition</td>
</tr>
<tr>
<td>Down Stream</td>
</tr>
<tr>
<td>Pre-harvest Canopy Closure (%)</td>
</tr>
</tbody>
</table>

**NOTE:** Post-harvest canopy closure must meet or exceed required canopy cover per nomograph in BM1.

**Difference between pre-harvest and post-harvest (%)**

**Note:** If the proposal is in Eastern Washington AND within the Bull Trout Overlay, harvest of shade trees is NOT permitted within 75’ of the bankfull width (BFW) or channel migration zone (CMZ), whichever is greater (WAC 222-030-040 (1)).
Western Washington Type Np RMZ Worksheet

A. Without regard to ownership, determine the total length of each separate Type Np stream system where at least a portion of the system is within the harvest unit. This includes the branching network of a Type Np system above the confluence with Type S or F water. See WAC 222-30-021.

Note: There can be more than one Type Np system within a harvest unit and each system requires a separate length determination. Use a separate worksheet for each Type Np system.

B. Determine which of the options below best fits the total length determined for a specific Type Np system. Circle the letter next to the best fit (i.e. letter a., b. or c.).

a. If the total Type Np system length (not just the length within the harvest unit) is less than 300': Leave a two-sided, 50’ buffer on the entire length of the Type Np water. Show the RMZ on the Activity Map.

STOP, WORKSHEET COMPLETED.

b. If the total length is greater than 300' but less than 1000': Starting at the confluence with Type S or F water, leave a buffer that is the greater of 300’ or 50% of the entire length of the Type Np water. In addition, buffer all sensitive sites on the Type Np stream that were not already buffered by the 300’ or 50% requirement. Show the RMZ on the Activity Map.

STOP, WORKSHEET COMPLETED.

c. If the total length is greater than 1000’: Leave a two-sided, 50’ buffer on the first 500’ of the Type N stream above the confluence with Type S or F water. Complete i. through vi. below.

i. Determine the total length of the Type Np system.

ii. Refer to the table below to determine the minimum % of buffer required on that portion of the Type Np water upstream of the first 500’ from the confluence of Type S or F water.

iii. Determine the length of Type Np water within the harvest unit that is upstream of the first 500’ from the confluence of Type S or F water.

iv. Determine the total length of buffering needed upstream of the first 500’ from the confluence of Type S or F water. (% in ii. times length in iii. = required buffer)

v. Determine the total length of all required buffering established to protect sensitive sites along the Type Np water within the harvest unit above the first 500’ from the confluence of Type S or F water.

vi. If the required buffer length in v. is less than the length in iv. determine the length of additional buffering required. (Length in iv. minus length in v. = additional buffer)

The buffering must be placed in priority areas. Show the buffers on the Activity Map.

Minimum percent of length of Type Np waters to be buffered when more than 500 feet upstream from the confluence of Type S or F water.

<table>

(For use with WW LTA forms dated 5/9/2014)
If you use this form, include a map showing the locations of your seed source.

Landowner Name: ____________________________________________

The landowner is responsible for meeting Forest Practices reforestation requirements.

Legal Description: ___________________________________________

Harvest is scheduled to occur (month/year): __________________________

Check one of the following:

☐ The landowner proposes an alternate plan (WAC 222-34-010(6) for natural reforestation as attached.

OR

☐ The landowner agrees to follow all the requirements listed below (WAC 222-34-010(5)).

- There is a seed source available that is capable of producing well-formed trees of a commercial tree species.
- The landowner will not harvest this seed source until ____________, or earlier if DNR issues a reforestation inspection report.
- The seed source:
  - Is shown on an attached map
  - Is marked on the ground
  - Is at least 8 seed trees per acre
  - Is within 400 feet of areas requiring reforestation
- The regeneration will be protected from competing vegetation and allowed to establish, grow, and survive.
Watershed Analysis Worksheet
(Use a separate worksheet for each Watershed Analysis)

Watershed Analysis Name: ____________________________

Check all of the following that apply:

☐ I have reviewed the Watershed Analysis Prescription documents. My proposal is not located on or adjacent to any of the described features. Prescriptions do not effect my proposal.

☐ I have reviewed the descriptions and maps for all prescriptions. My proposal is located on or adjacent to the following prescription areas:
  ☐ Surface Erosion Prescriptions
  ☐ Mass Wasting Prescriptions
  ☐ Hydrology Prescriptions
  ☐ Water Quality
  ☐ Water Supply / Public Works
  ☐ Riparian – applicable to landowners using the 20 acre exempt RMZ rule

Complete the following information for each prescription that affects your proposal or is adjacent to your proposal. Identify the resource sensitivity name and if you are implementing the prescriptions or not. Attach required reports and additional information as necessary.

<table>
<thead>
<tr>
<th>Resource Sensitivity Name/No:</th>
<th>Implementing Prescription: ☐ Yes ☐ No</th>

WESTERN WASHINGTON
Watershed Analysis Worksheet Instructions

This form must be submitted along with your Forest Practice Application/Notification (FPA) form if:

° You are harvesting timber (including salvage) or constructing roads within or adjacent to an approved Watershed Analysis area. OR
° If you answered yes to Question # 6 of the FPA because you are substituting Watershed Analysis Prescriptions.

A separate worksheet should be used for each Watershed Analysis.

The following information must be included in the space provided or on additional pages:

° The name of the Watershed Analysis where your proposal is located.
° Check all of the boxes that apply regarding your review of Watershed Analysis Prescriptions.
° Indicate each Resource Sensitivity Name (prescription name) that may affect your proposal.
° Indicate if you are implementing the prescription.
° Describe the specific harvest, road and other techniques you will use to implement the prescription.

Many prescriptions provide a landowner with a variety of different operational options. Sufficient detail needs to be included so that we can evaluate your proposal.

If your proposal is located on an area of resource sensitivity (prescription) AND you are choosing not to follow the prescription your FPA will be processed as a Class IV-Special and require a State Environmental Policy Act (SEPA) checklist.

(For use with WW LTA forms dated 5/9/2014)
The Family Forest Fish Passage Program
Small forest landowners own 3.2 million acres of Washington’s forests—about half the private forestland in the state. These family forests are important to fish and include thousands of miles of fish-bearing streams. A major key to restoring fish populations is removing barriers to fish passage. A single artificial barrier on a stream can keep fish from reaching many miles of habitat upstream. To help protect fish (a public resource), state Forest Practices Rules require forest landowners to address fish barriers by 2016.

The Family Forest Fish Passage Program helps private forest landowners replace fish-barrier culverts and other structures that keep trout, salmon and other fish from reaching upstream habitat. The program funds the replacement of eligible barriers with new structures. Since 2003, nearly 200 small forest landowners have taken advantage of the Family Forest Fish Passage Program, replacing 232 barriers and opening more than 485 miles of stream for salmon and trout.

To apply for the Family Forest Fish Passage Program go to [http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_fffpp.aspx](http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_fffpp.aspx)

The Forestry Riparian Easement Program
In 1999, the Washington State Legislature responded to the federal Endangered Species Act listing of several salmonid species by authorizing the Forest Practices Board to adopt rules for salmonid recovery. These rules increased the size of riparian buffers and created further measures to protect water quality and restore salmonid habitat. Recognizing that these rules would have a disproportionate impact on small forest landowners, provisions were included in the legislation to create a Forestry Riparian Easement Program to be managed by the Small Forest Landowner Office. The easement program acknowledges the importance of small forest landowners and the contributions they make to protect wildlife habitat and water quality.

The Forestry Riparian Easement Program compensates eligible small forest landowners in exchange for a 50-year easement on “qualifying timber.” This is the timber the landowner is required to leave unharvested as a result of forest practices rules protecting Washington’s forests and fish. Landowners cannot cut or remove the qualifying timber during the easement period. The landowner still owns the property and retains full access, but has “leased” the trees and their associated riparian function to the state.

To apply for the Forestry Riparian Easement Program go to: [http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_frep.aspx](http://www.dnr.wa.gov/BusinessPermits/Topics/SmallForestLandownerOffice/Pages/fp_sflo_frep.aspx)
