LANDSLIDES OF WESTERN WASHINGTON--
A PRELIMINARY BIBLIOGRAPHY AND INDEX

Compiled by
CONNIE J. MANSON

WASHINGTON DIVISION OF GEOLOGY AND EARTH RESOURCES
OPEN FILE REPORT 88-1
1988

This report has not been edited or reviewed for conformity with Division of Geology and Earth Resources standards and nomenclature.
LANDSLIDES OF WESTERN WASHINGTON--
A PRELIMINARY BIBLIOGRAPHY AND INDEX

compiled by

Connie J. Manson
Washington Division of Geology and Earth Resources

Landslides are a major geologic hazard in Washington, especially in the western part of the state. They are an important focus of the Department of Natural Resources' Timber, Fish and Wildlife program. This preliminary bibliography was compiled primarily to assist non-geologists in the identification and understanding of these landslides.

This work is a cumulated update, for western Washington only, of a previous landslide bibliography (Manson and Thorsen, 1983). It was drawn from a Division data base that includes references about the geology of western Washington, particularly as related to seismic hazards.

For landslides of eastern Washington, readers should refer to Manson and Thorsen (1983).

This report is arranged in two sections. The BIBLIOGRAPHY gives the full citation of all items included and is arranged alphabetically by author. The COUNTY INDEX is an index of full citations by county or major physiographic province.
