Department of Natural Resources

State Forest Trust Lands within School Districts

The two largest categories of state trust lands managed by the Washington State Department of Natural Resources (DNR) are Common School trust lands and State Forest trust lands. Almost 1.8 million acres of Common School trust lands produce revenue to help fund K-12 school construction projects throughout the state of Washington. State Forest trust lands differ from Common School trust lands in that they benefit specific counties and junior taxing districts. DNR manages more than 600,000 acres of State Forest trust lands in 21 counties for revenue that supports local and state schools as well as local roads, libraries, fire districts, ports, hospitals, emergency medical services and other county services.

The table below represents State Forest trust lands only. In total, 83 school districts in Washington have State Forest trust lands within their district boundaries; however, the amount of land within each school district's boundary varies from 45,000 acres to less than one-half acre. Some 23 school districts have more than 10,000 acres of State Forest trust lands within their boundaries; another 36 school districts have between 1,000 and 10,000 acres. The following table shows the approximate acreage per school district.
