

## ROPA.FP\_HARVEST\_APP\_SV

Data format: SDE Feature Class

File or table name: ROPA.FP\_HARVEST\_APP\_SV

Coordinate system: Lambert Conformal Conic

### Abstract:

The FP\_HARVEST\_APP\_SV spatial view represents Forest Practices Application/Notification (FPA/N) harvest unit boundaries, FPA/N specific tabular data, FPA/N specific Office Checklist tabular data and FPA/N specific stakeholder tabular data. An FPA/N may include harvest activity, forest road activity and aerial chemical spray activity. FPA/N harvest units include timber harvest and salvage sites. FPA/N harvest unit polygons are captured from FPA/N Activity Maps. Attribute data is captured from the FPA/N and associated documents, and may be compiled from many sources. From July 1996 through October 2002, FPSPOLY data was collected in Oracle using the Mapping and Planning System (MAPS). From October 28, 2002 to July 10, 2009, data was collected in Oracle using the Forest Practices Application Review System (FPARS). From July 13, 2009, to the present data is collected in dotNET using FPARSv3. Washington State is divided into two State Plane Zones, north and south. For this dataset, north zone data coordinates have been converted to south zone coordinates.

### FGDC and ESRI Metadata:

Identification Information

Data Quality Information

Spatial Data Organization Information

Spatial Reference Information

Entity and Attribute Information

Distribution Information

Metadata Reference Information

Metadata elements shown with blue text are defined in the Federal Geographic Data Committee's (FGDC) Content Standard for Digital Geospatial Metadata (CSDGM). Elements shown with green text are defined in the ESRI Profile of the CSDGM. Elements shown with a green asterisk (\*) will be automatically updated by ArcCatalog. ArcCatalog adds hints indicating which FGDC elements are mandatory; these are shown with gray text.

Description:

Abstract:

The FP\_HARVEST\_APP\_SV spatial view represents Forest Practices Application/Notification (FPA/N) harvest unit boundaries, FPA/N specific tabular data, FPA/N specific Office Checklist tabular data and FPA/N specific stakeholder tabular data. An FPA/N may include harvest activity, forest road activity and aerial chemical spray activity. FPA/N harvest units include timber harvest and salvage sites. FPA/N harvest unit polygons are captured from FPA/N Activity Maps. Attribute data is captured from the FPA/N and associated documents, and may be compiled from many sources. From July 1996 through October 2002, FPSPOLY data was collected in Oracle using the Mapping and Planning System (MAPS). From October 28, 2002 to July 10, 2009, data was collected in Oracle using the Forest Practices Application Review System (FPARS). From July 13, 2009, to the present data is collected in dotNET using FPARSv3. Washington State is divided into two State Plane Zones, north and south. For this dataset, north zone data coordinates have been converted to south zone coordinates.

Purpose:

The purpose of this data is to display proposed Forest Practices harvest areas across the landscape.
