Bidder's/Purchaser's Inspection of Sale Area and Forest Products

Acreage estimates and volume estimates contained within each timber notice of sale and each timber sale contract are made only for administrative and identification purposes. Except as expressly provided by the timber sale contract, the purchaser shall be responsible for paying the entire purchase price, even if the actual acreage or timber volume varies from the estimated quantity or volume shown.

All prospective bidders have the opportunity and are expected to inspect the sale area and the forest products located thereon. Bidders shall not rely on any representations by the State including, but not limited to, acreage estimates, volume estimates, appraisal or pre-bid documentation. The successful bidder/purchaser will further warrant that they have entered the timber sale contract without any reliance upon the DNR's volume estimates, acreage estimates, appraisals, pre-bid documentation, or any other representation by the DNR.

Any timber sale contract arising out of these public auctions will require the successful purchaser to warrant that they are entering the timber sale contract based solely upon their own judgment of the value of the forest products, formed after their own examination and inspection of both the timber sale area and the forest products being sold.

Exclusion and Disclaimer of Warranties

The PARTIES AGREE that the IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, and ALL OTHER WARRANTIES EXPRESS OR IMPLIED, ARE EXCLUDED from this transaction, and shall not apply to the goods sold. BIDDING PROCEDURES FOR TIMBER AUCTIONS

The general requirements that follow are a part of all Timber Notices of Sale to be auctioned by the Department of Natural Resources (DNR).

General Information

The State reserves the right to waive minor irregularities and the right to reject any or all bids.

A. This book contains the timber notices of sale and maps for each timber sale scheduled to be auctioned. More specific information can be obtained by contacting the appropriate region office at the number listed on the back cover of this book.

B. The timber notice of sale is a summary of sale information. For more specific information, interested parties are encouraged to view the Appraisal Packets on the DNR Internet Site @ www.dnr.wa.gov, this will take you directly to the Product Sales Section. The Appraisal Packets contain DRAFT copies of the timber notice of sale, map, contract, road plan, cruise data, precruise and cruise narrative, Forest Practices Application (FPA), Hydraulics Project Approval (HPA).

C. The sale preview packets may be obtained at no charge for individual sales by visiting the appropriate region office.

D. Timber sale contracts contain extensive terms and conditions that will be binding upon successful high bidders. Each bidder should carefully review all terms contained in the appropriate DRAFT timber sale contract prior to bidding on a sale, and should review the final contract prior to signing. DRAFT timber sale contracts are contained in the preview and presales packets and are available upon request at the respective region office.

E. Sales advertised in this book have not been approved by the Board of Natural Resources and are subject to the Board’s approval before they will be sold. The Board meets and approves sales approximately six weeks prior to auction. All sales are subject to confirmation by the DNR under RCW 79.15.120.

F. The State does not guarantee the accuracy of any information contained herein pertaining to particular sales. Therefore, all prospective purchasers are expected to make their own independent inspections and appraisals prior to bidding.

G. If any conflict exists between the information in the Timber Notice of Sale, timber sale map, sale preview packets and that in the timber sale contract, the signed contract will prevail.

H. Timber sales are subject to the Washington State Forest Excise Tax (RCW Chapter 84.33).

I. Within 30 days of sale confirmation, the apparent high bidder will provide to the State the Performance Security specified on each Notice of Sale.

J. Each DNR region office has information about sales offered in that region. For further information, contact the respective DNR region office. Region office addresses and telephone numbers appear on the back cover of this booklet.

K. The purchaser assumes the responsibility for any costs associated with extra maintenance or repair levied by a county for any county road used by the purchaser.

Schedule B  
Reality Reach WMZ Cable Area Prescription

The cable portion of the forested wetland will be thinned using cable yarding only. Trees may be removed on up to 1.5 acres using yarding corridors (length * width). The end result will take the form of clear-cut corridors with fully retained skips in between each corridor.

The purchaser will locate a minimum of 4 cable corridors. Once corridors are located, the width of each corridor will be calculated to arrive at the 1.5 acres (length of corridor times a width to get 1.5 acres). No thinning will occur between the corridors. Only corridor wood will be extracted. Fall timber into the corridors. Timber in corridors will be yarded from the far end first, over felled and bucked to prevent scouring of sensitive soils in the unit. A minimum of one-end suspension should be achieved in the corridors. Corridor locations must be approved by the Contract Administrator prior to the onset of any falling operations.

Development of an existing hardrock source (P-1400 Pit) at station 438+00 of the P-1000 road will involve clearing, stripping, drilling, shooting, and processing rock to generate approximately 114 cubic yards of rip rap and approximately 2,020 cubic yards of 3-inch-minus ballast. This rock is available at no cost on State land in Section 6, Township 39 North, Range 5 East, W.M.

Construction, reconstruction, or abandonment of any road shall not be permitted between November 1 and March 31 unless authorized in writing by the contract administrator. The hauling of forest products will not be permitted from November 1 to March 31 unless authorized in writing by the Contract Administrator to reduce soil damage and siltation.

ACREAGE DETERMINATION

CRUISE METHOD: Acres determined by GPS traverse. 174 acres net (includes 163.5 acres in the Unit, 3.1 acres in right of way and 7.4 acres in the corridors). Cruised using variable plot method. Expansion factor used is 40. Sighting height is 4.5 feet. Grid size plot spacing is 500 X 500 feet for the unit and 500' apart for the right of way and corridors. Plot ratio cruise count is cruise all. 30 plots were taken in the Unit, 6 plots were taken in right of way and corridors; for a total of 36 plots. Note: Right of way and corridor acreages were combined.

FEES: $18,775.25 is due on day of sale. $0.97 per ton is due upon removal. These are in addition to the bid price.
SPECIAL REMARKS:  (1) No tail hold trees are to be located outside the timber sale boundary tags. (2) Some of the yarding distances in the SW corner of the unit will probably require intermediate supports. (3) Blue special management tags represent experimental research plots.
Schedule B
Sumas Pass PC Thinning Specifications

LEAVE TREE DEFINITION

Leave trees in all units will be selected by comparing their characteristics with other trees in the stand. Leave trees will be the best trees from the largest diameter classes available.

Preferred leave tree species in order of preference are:
1. Douglas fir
2. Western redcedar
3. Silver fir
4. Sitka spruce
5. Western hemlock

Best tree definition is having the following characteristics:
1. Fullest and most vigorous crowns.
2. Free of disease, major defect and damage.

Uniformly distributed means:
Openings created by felling trees shall not exceed 30 feet between leave trees. If openings in the stand approach this diameter, sufficient trees shall be left on the perimeter of the opening to maintain the appropriate trees per acre.

Deformed tree:
Any tree that has forked tops, broken tops, and severe cat faces (bark removed on more than half the circumference of the tree).

All Douglas fir greater than 15” diameter breast height (DBH) are to be left standing unless leaving them results in a residual stand of more than the indicated spacing or trees that are severely deformed as defined above.

FOREST PRODUCTS TO BE REMOVED

For Entire Sale Area:

Remove all hardwood stems.

Cut all trees 6” DBH and less. Trees less than or equal to 6” DBH will not count towards meeting required stand conditions.

5 of the trees from the largest diameter class designated for removal (described below) per acre of T-3 and T-4 RMZ must be directionally felled toward or into the stream and left. The number of trees will be determined by calculating the area of RMZ for each stream, ie; length of RMZ times the width (100’ for T-4 and 135’ for T-3). The trees to be felled toward/into the stream shall be chosen from within the sale area and within 25’ of the timber sale boundary tags adjacent to each stream.

Within Blue Special Management tags:

All trees not painted blue, unless approved in writing by the contract administrator for operational purposes only.

Within White Timber Sale Boundary tags (excluding the areas within Blue Special Management tags)

All stems resulting in a minimum of 175 square feet basal area and a maximum of 185 square feet basal area in the residual stand (within the diameter limit described under ‘LEAVE TREE DEFINITION’ thinning from below).
RESIDUAL STAND TARGET

The residual stand target is a minimum 175 square feet of basal area and a maximum of 185 square feet of basal area using a basal area factor 40 prism.

GENERAL REQUIREMENTS

Cable yarding corridors will be limited to 12-feet in width including rub trees. Corridors will be at least 150 feet apart when parallel as measured from the center of the corridors unless approved by the contract administrator. Landings will be located to provide for parallel yarding corridors wherever possible. When radial yarding corridors are required from a central landing, the distance between yarding corridors must be no closer than 150 feet where the corridor leaves the unit as measured from the center of the corridors. Where possible corridors should be located in a manner to minimize the damage to or removal of leave trees. When corridors are field located, only leave trees within 3 – 5 feet of the center of the corridor should be removed prior to yarding. Following completion of yarding of each corridor, damaged leave trees within 6 feet of the center of the corridor may be felled and yarded to the landing. It is not required to remove all leave trees from the 12-foot corridor.

COMPLIANCE

On the main body of the sale outside of the special management boundary tags, variable radius plots will be taken to determine basal area per acre for the unit. Plots will be evenly distributed at a density of at least 2 plots per five acres. Each plot will be measured with a 40 basal area factor (BAF) prism; the number of “in” trees multiplied by 40 will give the basal area for that plot. The average basal area of all plots in the unit will determine if the unit meets its target value. Borderline trees shall be measured at DBH to the face of the tree to the nearest 1/10th inch and multiplied by the plot radius factor of 1.903 to determine limiting distance.

Within the areas delineated with special management boundary tags no trees with silver tags or blue paint on them shall be cut.

Diameter limit compliance will be monitored using a stump diameter-breast height diameter regression equation.
