acres of Unit 3. This is due to those areas being located within 0.7 mile of a type 1 spotted owl circle site center.
Activity Objective
The objective of this partial cut is to enhance northern spotted owl habitat through a “variable density thinning from below”, creating a heterogeneous patchwork of densities and retaining the most vigorous and dominant conifers on site.

(Variable Density Thinning)
LEAVE TREES DEFINED

The clear-cut patches (gaps) are approximately .25 to 1.0 acre in size; with all take trees marked in orange paint. The un-thinned patches (skips) are approximately 1 to 10 acres in size, and are bounded out with yellow “Leave Tree Area” tags or white “Timber Sale Area” tags, which are located in Units 2 and 3.

The thinning prescription for each unit is attached.

Leave trees will be selected by comparing their characteristics with other trees in the stand. The best leave trees should have the following characteristics (in descending order of importance):

1) Largest diameters and greatest height
2) Fullest and most vigorous crown
3) Free of major defect, damage, and disease

Leave trees shall be uniformly distributed over the thinned areas. Openings created by felling shall not exceed 25 feet between tree stems. In addition, leave snags where possible. All green tree and snag retention is subject to the safety standards of the Department of Labor and Industries.
