Timber Sales in this book are from state trust lands, managed to help build K-12 public schools, state universities, colleges, prisons, mental hospitals, the state Capitol; and to support local services in many counties.

Top left: State Forest Lands are managed to provide revenue to the counties in which they are located such as the Pacific County Courthouse in South Bend, Washington. Northwest Bridge Company of Portland, Oregon completed construction of the courthouse building in June of 1911. One unusual feature of the historic building is an “art glass dome” that crowns the structure. The courthouse is listed on the National Register of Historic Places. Photo: DNR/Tom Heller

Certification Opportunities for DNR Timber Purchasers

Certified forests are grown to an approved set of standards which demonstrate environmentally responsible, socially beneficial, and economically viable management practices that promote responsible forestry. This unique commitment to responsible forestry recognizes that forest landowners play a critical role in ensuring the long-term health and sustainability of our forests.

Forest Stewardship Council® (FSC®) is an independent, non-profit organization that promotes responsible management of the world’s working forests through the development of forest management standards, a voluntary certification system, and trademarks that provide recognition and value to products bearing the FSC label in the marketplace. FSC standards ensure forestry is practiced in an environmentally responsible, socially beneficial, and economically viable way.

Sustainable Forestry Initiative, Inc. is an independent non-profit organization internationally endorsed and accepted around the world. The Sustainable Forestry Initiative® (SFI®) program is based on the premise that responsible environmental behavior and sound business decisions can co-exist. Its three-chamber Board of Directors governs all aspects of the SFI program, with equal representation from the environmental, economic and social sectors.

Currently, all Department of Natural Resources (DNR)-managed forested state trust lands in Washington State are certified under the 2010-2014 SFI program Standard. Lands within DNR’s South Puget Habitat Conservation Plan Planning Unit, located within parts of King, Pierce, Thurston, Lewis, Kitsap, and Mason counties, are dually certified under the FSC Pacific Coast Regional Standard and the 2010-2014 SFI program Standard.

Certification under each standard involves an inspection audit of the landowner’s forest management activities by an independent third-party accredited team to verify that it meets specified forest management principles. If the forest unit complies with the specific standard, the landowner receives a certificate of conformance ensuring that responsible forestry is being practiced. Both standards encourage integration of perpetual growing and harvesting of trees with strong measures to protect wildlife, plants, soil, water, and air quality. Both standards provide a seal of approval that forests certified under these principles are well-managed. The global marketplace recognizes and endorses multiple forest certification standards. Each standard has individual market niches. By being dually certified, DNR can maximize its customer base and provide choices to the consumer.
DNR's FSC certificate number is: BV-FM / COC-080501

DNR's SFI certificate number is: BV-SFIS-US09000572

DNR-managed forested state trust lands within the South Puget Habitat Conservation Plan Planning Unit (located within parts of King, Pierce, Thurston, Lewis, Kitsap, and Mason counties) are certified as being in compliance with the Forest Stewardship Council Pacific Coast Regional Standard. This makes DNR's SP Planning Unit dually certified under both the FSC and SFI program Standards.

Bidder's/Purchaser's Inspection of Sale Area and Forest Products
Acreage estimates and volume estimates contained within each timber notice of sale and each timber sale contract are made only for administrative and identification purposes. Except as expressly provided by the timber sale contract, the purchaser shall be responsible for paying the entire purchase price, even if the actual acreage or timber volume varies from the estimated quantity or volume shown.

All prospective bidders have the opportunity and are expected to inspect the sale area and the forest products located thereon. Bidders shall not rely on any representations by the State including, but not limited to, acreage estimates, volume estimates, appraisal or pre-bid documentation. The successful bidder/purchaser will further warrant that they have entered the timber sale contract without any reliance upon the DNR’s volume estimates, acreage estimates, appraisals, pre-bid documentation, or any other representation by the DNR.

Any timber sale contract arising out of these public auctions will require the successful purchaser to warrant that they are entering the timber sale contract based solely upon their own judgment of the value of the forest products, formed after their own examination and inspection of both the timber sale area and the forest products being sold.

Exclusion and Disclaimer of Warranties
The PARTIES AGREE that the IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, and ALL OTHER WARRANTIES EXPRESS OR IMPLIED, ARE EXCLUDED from this transaction, and shall not apply to the goods sold. e. The correctness of any soil or surface conditions, presale construction appraisals, investigations, and all other pre-bid documents prepared by or for the State. These documents have been prepared for the State’s appraisal purposes only.

f. That the sale area is free from threatened or endangered species, or their habitat. The State is not responsible for any interferences with forestry operations that result from the presence of any
threatened or endangered species, or the presence of their habitat, within the sale area.

Schedule B
Red Camp WMZ & RMZ Thinning Prescription

- Retain an average of 100 to 120 trees per acre from the dominant and co-dominant crown classes.
- Cut pacific silver fir up to 20 inches DBH
- Cut western hemlock up to 16 inches DBH
- Cut all hardwoods.
- Openings created by felling trees shall not exceed 30 feet between leave trees in designated RMZ thinning areas. If no conifers exist to fill spacing requirement, hardwoods will be substituted.

Special Thinning Conditions: In areas where thinning is not necessary, i.e., prescription is met, do not put in yarding corridors or skid trails. These areas must be identified and agreed upon in advance with the Contract Administrator.

Corridors must be marked by the Purchaser and approved by the Contract Administrator. Non-prescription trees which fall within corridors may be felled and must be paid for as additional volume per Clause G-101. Trees marked with a blue special management area tag along the RMZ/WMZ boundary may be removed if they either meet the prescription as described in this Schedule B, or are necessary for yarding corridors.

Ground yarding corridors: Corridors are limited to 14 feet wide (including rub trees) and no less than 75 feet apart as measured from the center of the corridor. Where possible corridors should be located in a manner to minimize the damage to or removal of leave trees.

Cable corridors: If cable yarding is necessary in thinning areas, then the following apply: Landings will be located to provide for parallel yarding corridors whenever possible. Corridors will be limited to 12-feet including rub trees. Corridors will be at least 100 feet apart when parallel as measured from the center of the corridors. When radial yarding corridors are required from a central landing, the distance between yarding corridors must be no closer than 100 feet where the corridor leaves the unit as measured from the center of the corridors. Where possible corridors should be located in a manner to minimize the damage to or removal of leave trees. When corridors are field located, only leave trees within 3 – 5 feet of the center of the corridor should be removed prior to yarding. Following completion of yarding of each corridor, rub trees within 6 feet of the center of the corridor may be felled and yarded to the landing. It is not required to remove all leave trees from the 12-foot corridor.

Down wood and snag recruitment: All Douglas-fir and western redcedar trees that are marked with orange paint on the bole and root collar shall be made into snags through girdling at the base of the bole or topping the tree above 16 feet. All other trees marked with orange paint on
the bole and root collar shall be felled toward the stream channel and left as downed woody debris.

Compartments for assessment of damage:
